PREFACE.

In presenting Volume I of "Pallava Antiquities" to the public, the author wishes it to be known that this is the first of a series of volumes which he hopes to publish by continuing his researches and making new discoveries concerning the Pallavas.

The subject-matter of this book is a study of the Antiquities already discovered but which have not been thoroughly studied.

The author has confined himself to a comparison of the Pallava monuments with one another; he has not, therefore, attempted to compare the monuments of the Pallava period with those of other periods with a view to determine the distinctive characters of the Pallava Art.

In fact, this subject has been already treated in his work "Archéologie du Sud de l'Inde, Paris, 1914", but as this book is written in French and is thus not within reach of all readers in India, he has written in English an epitome of it, a booklet called "Dravidian Architecture" in which he has specially examined the characters which distinguish the Pallava monuments from those of other epochs. Besides, he has also ascertained and fixed the technical terms that must be used in designating the different parts of a building.

This epitome, which, in the author's opinion, is indispensable for the study of Pallava Art, is actually in

the press and will appear before the end of the current year.

The original of "Pallava Antiquities, Vol. I" was written in French during the month of June 1916. (*Vide "Revue Historique de l'Inde Française"* in which it has been published under the heading "Les Antiquités de l'époque Pallava" in Vol. I, 1st half-year of 1916, 34, Galerie d'Orléans, Paris).

The present work is a translation of it made in July 1916 by M. R. Ry. V. S. Swaminadha Dikshitar B.A., L.T., officier d'académie, Professor of English in the Colonial College, Pondicherry, to whom the author tenders his hearty thanks.

He desires also to thank M. R. Ry. S. Krishnaswami Aiyangar, the learned Professor of History and Archæology in the University of Madras, for his having kindly given tentative translations of the Panamalai, and Mélachêri inscriptions.

PONDICHERRY, }
August 1916. }

G. J-D.

INTRODUCTION.

The traveller who formerly took the road from Pondicherry to Madras, found on his way very strange monuments: these were not built of stones placed above one another, but were simply rocks that the sculptor's chisel had worked on, either to give them the external form of a building, or to excavate in them subterranean chambers.

Being situated near Madras, these curious pieces of sculpture that fittingly attract the attention of archæologists have been variously described under the name of "the antiquities of Mahābalipuram" or "the Seven Pagodas"¹

It must however be mentioned that these monuments are interesting, not so much because they are cut in the rock, but because these sculptures are so very beautiful.

The rock-cut temples at Mahābalipuram are sculptured in an elegant architectural style: the capitals, the brackets, the cornices, the roofs, the gable-ends, have the most graceful forms and are ornamented with rose-work, foliage and volute which produce a most charming effect.

This is not all: the numerous bas-reliefs represent personages whose beautiful attitudes and poses compel admiration. Very often these personages have a calm and peaceful attitude: their gestes are full of

1. Concerning a description of the "Seven Pagodas," *Vide "Archéologie du Sud de l'Inde"* vol. I, pp. 75-102.

sweetness and serenity ; but the bas-reliefs that represent scenes of violence are full of life. As an example I will mention the justly celebrated bas-relief of the fight between Kâlî and the giant Mahîshâsura, which is assuredly one of the best works in India.

The sculpture is the visible manifestation of intellectual progress : and it is certain that the sculptors of Mahabalipuram had attained a high degree of civilisation.

Who were these men and when did they live ? There is no doubt that the Hindu princes who reigned over this part of India when those rocks were carved belonged to the Pallava dynasty.

The monuments in the Seven-Pagodas contain in fact inscriptions in praise of the Pallava princes. Besides, in many other places, at Kâñchîpuram, Śiyamaṅgalam, Trichinopoly, etc., there are found some temples similar to those of Mahâbalipuram and containing Pallava inscriptions.

The temples at Mahâbalipuram, as well as all those that have been discovered in other places and contain similar inscriptions, can therefore be considered as the work of the Pallavas.

Luckily, the history of the Pallavas is known to us otherwise than by the inscriptions engraved on the monuments. Numerous documents have been discovered which are written on copper-plates and give us precious information on the subject.

The question now is this: given a Pallava temple, to which king of that dynasty are we to attribute it ? This interesting question has led to many researches. We may affirm, however, that this problem has not so far been solved in a satisfactory manner.

The only method that has been followed to discover the age of these Pallava monuments is the study of the inscriptions found on them. This study is certainly necessary: but it is a mistake to believe that that alone is sufficient. However, the present-day opinion is that the study of these inscriptions is the only means of arriving at a solution.

Mr. E. Hultzch, in a recent work on this question (Epigraphia Indica, Vol. X, No. 1, page 1: The Pallava inscriptions of the Seven Pagodas), has written:

« The important question of the authors and the » dates of those excavations can be answered *only* by a » careful study of the inscriptions engraved on them. »

Why, this method of investigation will not do: if employed all alone, great mistakes may be committed. It is possible that the inscriptions on a monument have been written long after it was erected, and then these inscriptions not only do they not give us any information about the author, but may even lead us into error.

An important factor in determining the age of a monument, is the study of the style of the sculptures. This important element has been totally neglected up to the present.

It will be very useful to find out exactly the style of the rock-cut temples of Mahêndravâdi, Vallam, Dala-vânûr, Pallâvaram, etc. But then it is remarkable that up to the present time the photographs of these monuments have not been reproduced in any work.

We should therefore study the styles of all the monuments which could be attributed to the Pallavas. For that purpose, we have visited all the places where this kind of monuments and inscriptions were reported to

exist; nay more, we have tried to discover others, and very often our efforts have been crowned with success. Notably at Panamalai and at Mélachêri, we have luckily discovered certain temples and inscriptions a knowledge of which has supplied new elements for the history of the antiquities of this kind.

We wish then to make a general study of it; for this we must compare the monuments from three different standpoints :

- 1° the tenor of the inscriptions;
- 2° the form of the letters in which the inscriptions are written;
- 3° the style of the sculptures.

It is the result of these researches that we give below.

In many cases, we shall have occasion to propound new ideas; in many others, our conclusions may not be very different from those arrived at by others; however, even in the latter case, we think that this study shall not have been useless, for these ideas will appear to be more correct, being based on a greater number of proofs.

CHAPTER I.

THE EPOCH OF RÂJASIMHA.

In the "South Indian Inscriptions" by Mr. E. Hultzsch (Madras 1890) No. 31, page 24, a question is raised concerning a cave-temple at Panamalai¹ which contains an inscription consisting of a single Sanskrit verse which is identical with the last verse of the principal inscription in the Kailâsanâtha temple at Kâñchîpuram. The fac-simile of this inscription has been communicated to Mr. Hultzsch by M. R. Ry. Râghavendrâchârya of Vâñûr.

From the translation of this Sanskrit verse, Mr. Hultzsch has concluded that the cave at Panamalai was cut by Râjasimha, the prince who had built the Kailâsanâtha temple at Kâñchîpuram.

On the 1st January 1915, I went to Panamalai with the object of photographing this cave, and as it contained an inscription of Râjasimha, I wished to know the style of a temple cut in the rock during his time.

Having arrived on the spot, I saw the inscription mentioned above, but I found that it was not written in a temple cut in the rock, but simply on an anfractuosity of the rock within which an image of Kâli (Mahishâsuramardâni) has been placed.

1. Panamalai is a village in the Villupuram Taluk (South Arcot District)—(See Madras list of Antiquities by Sewell, Vol. 1, page 209, and Madras District Gazetteers—"South Arcot" by François (1906) page 385.)

This small natural cavern is situated at the foot of a rock. At its top is a small temple which I visited.

Standing before the temple, I ascertaind two things : 1° that the style of the temple is the same as that of the Kailāsanātha temple at Kāñchipuram ; 2° that round the base of this temple is engraved in a single line an inscription written in that characteristic alphabet known as the "Grantha-Pallava."

This inscription is not mentioned anywhere. M.R.Ry. H. Krishna Sastri, Government Epigraphist for South India, to whom I communicated it, was good enough to write to me on the 27th August 1915 : « In acknowledging with thanks your printed note on the Pallava inscription at Panamalai, forwarded with your letter of the 20th instant, I beg to inform you that the inscription you have discovered is a new one. It has been neither published nor even noticed hiterto. »

The discovery of a temple, the architectural style of which is the same as that of the Kailāsanātha temple at Kāñchipuram and which contains an inscription, enables us now to have new documents for the history of Pallava antiquities.

We shall therefore study :

- 1° the tenor of the inscription ;
- 2° the style of the temple ;
- 3° the form of the letters of the alphabet used in the inscription.

Section I. The tenor of the inscription

The beginning and the end of the inscription are concealed by a structure of bricks built in front of the temple. So a portion of the first sentence and the whole of the last part of the inscription are miss-

ing. The letters have been preserved excellently well except towards the middle wherefrom a stone which contained some letters has been removed.

I published in July 1915 a tentative translation of it. As this seemed to be insufficient, M. R. Ry. S. Krishna-swami Aiyangar, Professor in the University of Madras, has been pleased to give me a more correct translation of the inscription from my reproduction of it. (*Plate I*).

Tentative Translation.

Drōṇi³ famed for the might of his arm was born a (minor) incarnation of Śiva.

From him of the name Drōṇi, pure by the performance of great penance, there appeared, as the sciences of the Vedanga from the Veda, the ruler of the earth named Pallava

From whom (did descend), as the floods of the Ganges from the moon,⁴ the great family of the Pallavas, sanctified by treading in the path (of righteousness), holy and so worthy of great esteem.

A dynasty of paramount sovereigns, made pure by the frequent baths at the conclusion of the (numerous) horse-sacrifices⁵ performed by them.

1. may be 'Sadhṛta'—(S. K.)

2. *mauli* is the correct form.—(S. K.)

3. Drōṇih, or more correctly Drauni, was son of Drōṇa the preceptor of the Pandava and Kaurava Princes. The Pallavas claim descent from him by a Nāga Princess. Slokas 4 and 5 of *S. I. I.*, Vol. I., Ins 32.—(S. K.)

4. There is nothing, so far as I know, to connect the Ganges and the moon in this manner unless it be a reference to the Ganges flowing from the matted locks of Śiva where also resides the crescent moon.—(S. K.)

5. Horse-sacrifices are performed to assert one's claims to the position of King of Kings or Emperor. The great-sacrifice, like other sacrifices, concludes with a bath which is considered peculiarly holy, as bringing to a conclusion a work of great merit.—(S. K.)

The chief of this family, the like of which did not exist before, and which belonged to the most holy tribe (gotra) of Bhāradvāja;¹

Whose fame had spread over the circle of the world which was taken forcible possession of (conquered) by the undiminished prowess of his arm;

Who, (born) from him (who bore) the title Ēkamalla,² as Guha (Subrahmanyā) from God Paramēśvara,³ shone with the prowess of his arm;

Who was known by the name Rājasimha of sanctified reputation, radiant in war-like pride made firm by his own strength;

Who was king of lions by the destruction of the elephants, the enemy kings;

Who was destroyer of the crowd of hostile kings and maker of all things auspicious;

His mind purified by the unremitting hold of devotion (to God), having given always.

.....
To whom of Śiva of the deer-spotted (moon) crest.....

The remaining two lines are too far broken up to make any sense as they stand. The inscription does not appear to come to an end.⁴

S. Krishnaswami Aiyangar.

1. Bharadvāja is a Vedic Rishi, considered the progenitor of those that claim to belong to the gōtra of Bharadvāja. Iṛōnāchārya, and Asvathāma his son, naturally belonged to this Gōtra.—(S.K.)

2. This appears to have been a title of Paramesvara I.—(S.K.)

3. This seems to imply a reference to the fact that Rājasimha's father also bore the name Paramēśvara. (Vide stanza 5, *S. I. I.*, Vol. I., No. 24.)—(S. K.)

4. Rājasimha, the “king of lions, destroyer of the elephants, the

The Panamalai inscription greatly resembles the one found at the base of the Vimâna of the Kailâsanâtha temple at Kâñchîpuram (*South Indian Inscriptions*. Vol. I, p. 12, No. 24). Both inscriptions begin with the genealogy of Pallava, the founder of the dynasty.

Then comes a eulogy of the Pallava princes.

Afterwards it is said that in this family was born a prince called Râjasimha who was begotten exactly as Paramêśvara begot Guha (Subramaṇya.)

This is not a mere comparison. It means precisely that Râjasimha is the son of a King named Paramêśvara.

Then follows a panegyric of Râjasimha, who is compared in both the inscriptions to a lion, vanquisher of the elephants, which represent the enemy princes. (According to tradition, the lion is the natural enemy of the elephants.)

hostile kings", was the son and successor of Paramêśvara Varman I, who, according to this inscription, seems to have had the special title "Ekamalla" (the sole warrior). This is exactly to the same purport as Sloka 5 of No. 24 of Vol. I, *South Indian Inscriptions*,—another inscription of Rajasimha. This seems the first record which gives this title to Paramêśvara Varman I.

The genealogical information that is available in this is Drauni (Asvattâma), his son Pallava, in this line Râjasimha from Paramêśvara Varman I. The other inscription from Panamalai already referred to, containing no more than the Mangala sloka (benedictory verse) of the Kailâsanâtha inscription of Râjasimha, this inscription and that taken together indicate that Râjasimha was the builder of the temple at Panamalai, the architectural similarity of which to the shore-temple at Mahâbalipûr and to the Kailâsanâtha temple at Conjeevaram is already adverted to. In regard to genealogical details as far as they go, and the relation between Paramêśvara and Râjasimha, there is a very close similarity even of expression between this inscription on the one hand, and No. 24 of Vol. I, *S. I. I.*, and the Kasakudi-plates on the other, leaving no doubt that Râjasimha was the son and successor of Paramêśvara Varman I. Râjasimha was a Saiva according to No. 24 referred to above.—(S.K.)

Rājasimha is called the King of Lions.

What makes it difficult to determine the age of the monuments with the aid of the inscriptions on them is that many Pallava princes have not only the same name, but also the same epithets, which makes it impossible to know exactly which prince is referred to.

But, here, there is no room for doubt, for, there is only one Pallava king, Narasiṁhavarman II, who had the characteristic surname of Rājasimha. The inscription on the pillar in Vyāghrapurisvara temple at Vāyalūr (*vide G. O.* No. 538, 28th July 1909, p. 41, No. 368) contains a complete genealogy of this prince surnamed Rājasimha (King of lions) (*G. O.*, No. 538, 28th July 1909, p. 78).

Narasiṁhavarman II was the son of Paramēśvara-varman I; the Panamalai inscription says that very clearly, when comparing his birth to that of Guha; the one being the son of God Paramēśvara and the other the son of the king of the same name.

In his report on the tenor of the Vēlūrpālayam plates (*G. O.* No. 832, 28th July 1911, Part II, page 61), M.R.Ry. H. Krishna Sastri says :—

« There is one point of peculiar interest to notice in this part of the account, viz., the omission of Ma- hēndravarman II after Narasiṁhavarman I, as given in the accepted genealogy of the Pallavas, and the suggestion of an unnamed king between Paramēśvara- varman I and Narasiṁhavarman II, the latter being called the son's son (putra-sūnu) of the former.»

The only explanation that can be given is certainly this :—that the author of the Vēlūrpālayam plates did not know well the relationship of the princes that reigned more than one century before the time when he wrote

The building of Kailâsanâtha temple at Kâñchîpuram was considered as one of the most important events in the reign of Narasiñhavarman II, for, we find it mentioned in the Vêlûrpâlayam plates (*G. O.* 28th July 1911, p. 61). In fact, it is said there, that this king built “a stone temple for Śiva resembling Kailâsa.”

Besides, this king, according to the plates of Kâsakûdi (*S. I. I.*, Vol. II, part III, p. 342), of Udayendiram (*S. I. I.* Vol. II, part III, p. 371), and of Vêlûrpâlayam (*G. O.*, 28th July 1911, p. 61), does not seem to have done anything else during his reign except adoring Śiva, loading the Brahmans with favours and building temples.

It being granted that this king reigned at the epoch intervening between the victory of Paramêśvaravarman I. over Vikramâditya I. (655-680) and the victory of Vikramâditya II. over Nandivarman - Pallavamalla (about 740), it must be admitted that the temple of Panamalai and that of Kailâsanâtha at Kâñchîpuram have been constructed by Râjasîmha in the first years of the 8th century (700 to 710 A.D.).

Section II. The style of the temple.

We have then at present two monuments which, judging from the inscriptions on them, appear to be contemporaneous. We have said that they have been built in the same style. It is this that we must now prove by giving an exact description of that style.

As for the temple of Kailâsanâtha at Kâñchîpuram we refer the reader to two works: 1° *Pallava Architecture*, by Alexander Rea, Madras, 1909, in which are given the plan of the temple and some excellent pictures; 2° *Archéologie du Sud de l'Inde*, Volume I,

Architecture, Geuthner Publisher, Paris 1915, pages 103 to 111—a work in which we have tried, for the first time, to define the style of Rajâsiñhâ. We shall specially describe here the temple of Panamalai :—

1° The plan of the temple presents a very rare peculiarity which is also found in the temple of Kailâsanâtha at Kâñchîpuram (see *Pl. IV*). By the four sides of the sanctuary are placed collateral niches which open either towards the east or towards the west (but never towards north or south). These niches contain Lingams.

2° All the Lingams at the Panamalai as well as the Kâñchîpuram temple have a peculiar and characteristic form. Whereas the ordinary lingam is always cylindrical, here it is in the form of a prism with 8 or 16 faces, (*Pl. VI*). Often these faces are slightly fluted.

3° The sanctuary (Garbhagriham) of the Hindu temples is never ornamented in the interior; the walls around the lingam are bare, but at Panamalai and at Kâñchîpuram the walls at the back of the sanctuary are ornamented with an image in bas-relief that represents Sômaskanda, that is to say, Śiva and Pârvatî with the latter holding the infant Skanda on her lap. On both sides of Śiva, but behind, stand Brahmâ and Vishnu.

4° We find rearing lions supporting the pillars which are at the corners of the edifice. These lions are big and differ much from those that are seen so often in modern temples. The rearing lions as those of Panamalai are seen in large numbers in the Kailâsanâtha temple at Kâñchîpuram.

5° The walls of the temple at Panamalai are adorned with niches, the framework of which has a very special form which is seen often in the temple of Kailâsanâtha at Kâñchîpuram.

We shall give to this framework the name of “Tiruvatchi,” as in these days there exists a similar ornament bearing this name.

The Tiruvatchi at Panamalai is formed of a single arch the extremities of which emerge from the mouth of two fabulous animals (Makaras). They have the trunk of an elephant, the tail of foliage, and on these animals are mounted little Gandharvas.

Pl. V. represents this ornamentation of the temples of Rājasimha which we shall call “single-arched tiruvatchi.”

Upon the whole, by their plan, by their prismatic lingams, by the very special image of Sōmaskanda, by their rearing lions and by the single-arched Tiruvatchi, the temples of the epoch of Rājasimha can be clearly made out.

Pl. II. will give an idea of the general aspect of the temple at Panamalai.

However, as the details cannot be distinguished, the different parts of the edifice will be found represented in *Pl. III.*

We shall finish by saying that the temples at Panamalai and Kāñchīpuram are not monolithic but are built of blocks of stone superposed on one another.

Section III. The Alphabets of the inscriptions.

We have proved, relying on the tenor of the inscriptions and the style of the monuments, that the temple of Kailāsanātha at Kāñchīpuram and that at Panamalai are contemporaneous. But, if we compare the letters of the two inscriptions, we see easily that they differ almost entirely from each other.

Plate I.

(PANAMALAI.)

Pallava inscription at Panamalai.

Plate II.

(PANAMALAI.)

Pallava temple at Panamalai (northern side.)

A look at *Pl. VII.* is enough to prove it. On examining them closely, we observe that these letters differ in two ways:

1° The letters of the Kāñchīpuram inscription are florid ; in place of straight lines, we find zigzag lines forming various flourishes ; the letters of Panamalai are simple.

2° The characters of these two inscriptions are not of the same degree of evolution. The Kāñchīpuram alphabet would appear to be about 50 years older. Particularly the letters ग, ज, ण, न, ब, भ, श, स are more archaic.

Since we cannot doubt that the two inscriptions are contemporaneous, we must admit that the form of the characters is not enough to enable us to affirm that one inscription is older than another. However, that is what has been done up to the present.

The Kāñchīpuram inscription that we have mentioned above is the one which is at the base of the sanctuary of Rājasimhēśvara in the temple of Kailāsanātha and which has been translated and published in *South Indian Inscriptions*, Vol. I, p. 12, under No. 24.

There exist in the same temple inscriptions (Nos. 25 and 26) written on the lower part of the sanctuaries (Rathas) that are all round the enclosure of the temple.

The inscriptions are written in four tiers. And each of these is written in a different alphabet. Particularly, the second tier is written in the same alphabet as that of Panamalai. The third tier is in the same florid characters as those of inscription No. 24, which stands at the base of Rājasimhēśvara temple. It is therefore certain that these two tiers are contemporaneous.

Relying only on the form of the letters, Mr. E. Hultzsch has affirmed that the third tier belongs to the time of Râjasimha but that the second tier must be a later copy made by a successor of Râjasimha;

« ...the third tier is written in the same arcahic alphabet, as the inscription round the Rajasimheśvara temple » and evidently belongs to the time of Râjasimha, the » founder of the temple, himself. Thus the first and » second tiers must be considered as later copies of the » original inscription in the third tier, which were » executed by some descendants of Râjasimha (*S. I. I.*, » Vol. I, p. 10).»

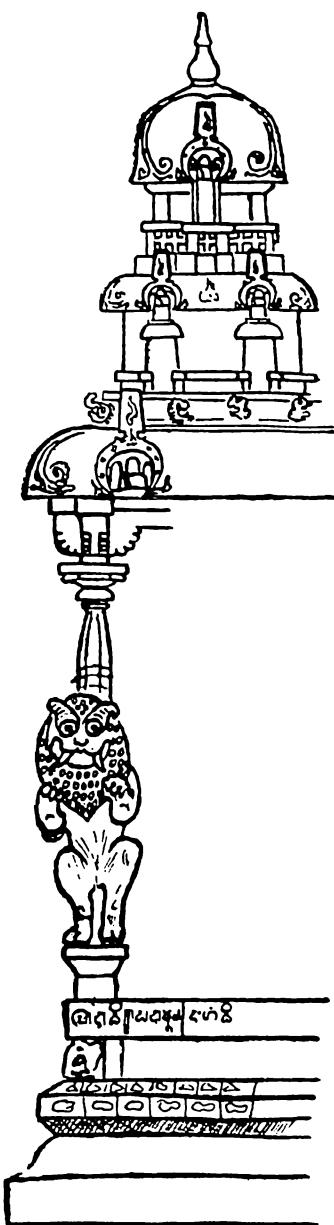

We have not up to this time said anything about the first and the fourth lines. They are written in the same alphabet and it differs entirely from the alphabets we have already spoken of. Whereas the latter are of the Grantha family, the former is of the Nâgarî family. It is certainly a foreign alphabet. At what period were the first and the fourth tiers written? As the second and third tiers are of the time of Râjasimha, it is extremely probable that the first and the fourth lines are contemporaneous with the two others, that is to say, that the four tiers have been written at the time of the construction of the temple by Râjasimha.

This opinion is at variance with that of Mr. Hultzsch who says (*Ep. Ind.*, Vol. X, No. 1, p. 3):

« We may place the inscriptions written in both alphabets in the time immediately preceding the conquest of the Pallava territory by Vikramaditya II (A.D. 733-734) to (746-747).»

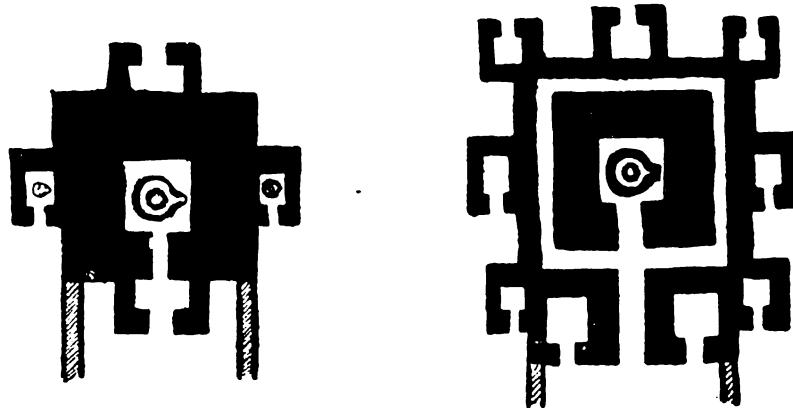

Mr. Hultzsch is therefore of opinion that these different alphabets are not contemporaneous: only the florid characters are of the time of Râjasimha. and the

Plate III.

Architectural order of the Pallava temple at Panamalai.

Plate IV.

at Panamalai.

B. Map of the garbhagriham of the Kailasa-
nâtha temple at Kâñchipuram.

others of that of the successors of this prince, Parameśvaravarman II and Nandivarman-Pallavamalla.

The discovery of the inscription in the temple of Panamalai has proved, on the contrary, that at the time of Rājasiṁha, different kinds of alphabets were used and that a difference in the stage of evolution of the letters does not at all indicate a difference in the ages.

To sum up: it can be affirmed, that, at the time of Narasiṁhavarman II, they used for inscriptions on stones three kinds of Sanskrit alphabets:

1° "The simple Grantha-Pallava" (that of Panamalai). It resembled much the alphabet that was employed in writing on copper plates. (*Vide* inscriptions of Kāram and Kasakūdi.)

2° The florid Grantha-Pallava which is more archaic than the first. This alphabet was perhaps devised by the predecessor of Rājasiṁha 50 years earlier. As it was much embellished and little employed, it was handed down without any change, and the sculptors of the time of Rājasiṁha who wished to employ this alphabet were satisfied with copying the old models instead of embellishing the writing of their days.

3° The Nāgari-Pallava alphabet which probably originated in a region of India farther north.

We shall conclude by expressing this new idea that different kinds of alphabets have been able to exist at the same time and that we must not rely only on the degree of evolution of the letters for determining the age.

CHAPTER II.

THE EPOCH OF MAHÊNDRA.

In 1890, M. Hultzsch, in giving a translation of two inscriptions (*S. I. I.*, Vol. I, p. 29. Nos. 33 and 34), has said that the upper cave at Trichinopoly bears the inscriptions of a Pallava king named Guṇabhara surnamed Śatrumalla.

In 1892 (*G. O.* No. 642-3, 14th Aug. 1893—inscription No. 185 of 1892) an inscription of a king named Lalitāṅkura, Śatrumalla, Guṇabhara, Mahēndra-pōtarāja, was discovered at Vallam. V. Venkayya (*Ep. Ind.* Vol. III, p. 277), relying upon Periyapurāṇam, has proved that Śiruttōnda-Nāyanār was a contemporary of Narasiṁhavarman I. and that Appar, who was older, was first persecuted and then protected by a king whose surname was Guṇabhara and who must therefore be Mahēndravarman I.

From that he concludes that the caves at Trichinopoly and Vallam must be attributed to the same prince.

In 1896, was discovered (*G. O.* No. 814 - 815, of the 6th August 1896) the inscription (No. 13 of 1896) in the rock-cut temple at Mahēndravāḍi which was dedicated to Vishṇu by King Guṇabhara under the name of Mahēndra-Viṣṇugriha (*Ep. Ind.*, Vol. IV, p. 153).

In 1900 (*G. O.* Nos. 833-835 of 22nd August 1900) the inscription (No. 67 of 1900) found in the cave at Śiyanāgalam which contains the name of a king called Lalitāṅkura (*Ep. Ind.*, Vol. VI, p. 320, No. 32) was, as

that of Mahēndravāḍi, attributed to Mahēndravarman I.

In 1905, V. Venkayya attributed to the same king the cave at Dalavānūr (*G. O.* No. 518, 18th July 1905, p. 47) which contains an inscription of Satru-malla (No. 51 of 1905).

Again, in 1909 (*G. O.* No. 538, 28th July 1909, p. 75) M. R. Ry. H. Krishna Sastri attributed also to Mahēndravarman I. the cave of Pallāvaram which bears inscriptions containing the names of kings analogous to those found in the abovementioned caves.

It was thus admitted that the caves and inscriptions at Trichinopoly, Vallam, Mahēndravāḍi, Śiyamaṅgalam, Dalavānūr and Pallāvaram, were contemporaneous and that they must be attributed to Mahēndravarman I.

Now, when Mr. Hultzsch's article on Pallava inscriptions of the Seven Pagodas appeared (*Ind. Ant.*, Vol. X, No. 1), we read in page 2, note 2, this remark :

« The alphabet of the Trichinopoly cave inscription » is more recent, and the opinion that it belongs to » Mahēndravarman I. (*S. I. I.*, Vol. II, p. 341) cannot be » upheld. »

It is true that the inscriptions at Trichinopoly are not written in the same alphabet as those at Dalavānūr, Śiyamaṅgalam and Mahēndravāḍi. During a visit to Trichinopoly, I ascertained that all the inscriptions attributed to Mahēndra, the published ones as well as those that have not yet been published, were written in an alphabet which seems to be more recent than that used at Dalavānūr, Śiyamaṅgalam and Mahēndravāḍi.

Besides, during a visit made to Pallāvaram, I verified the fact already stated by M. R. Ry. H. Krishna Sastri that the Pallāvaram inscriptions were like those at Trichinopoly.

« The inscription in ancient Pallava - Grantha characters written on the beams of the upper and lower verandahs of this cave, consists of a single long line of writing like the one on the pillar in the upper cave of the Trichinopoly rock. » (G. O. 28th July 1909, page 75).

Thus, from a paleographical point of view, the six caves in question must be divided into 3 categories :

1° The Vallam cave, where the inscription is in the Tamil Alphabet and which therefore is beside the question.

2° The caves at Dalavânûr, Šiyamangalam and Ma-hêndravâdi, where the inscriptions are written in a very archaic Grantha-Pallava alphabet.

3° The caves at Trichinopoly and Pallâvaram, where the inscriptions are written in a less archaic and more developed form of Grantha-Pallava characters.

The whole question deserves to be examined anew. The question is : to which kings must these antiquities be attributed and what is their date ?

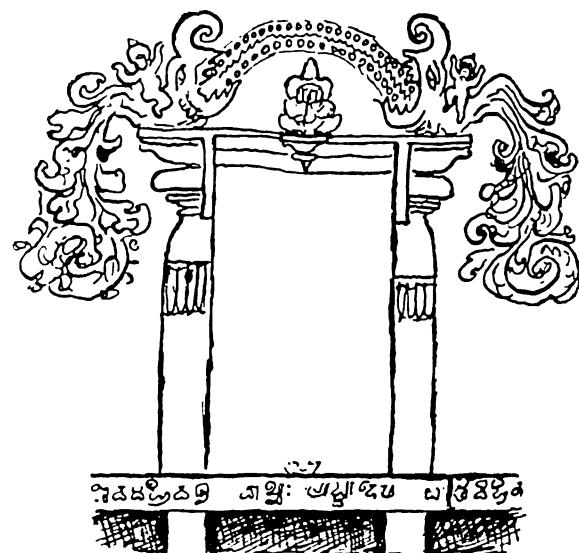

We think that it is possible to arrive at a solution only by an attentive study of the monuments themselves.

1° From an architectural point of view, nothing has been done ; it is therefore/ essential to determine the style of these monuments with the aid of photographs of each of them.

2° From a palæographic point of view, the inscriptions which have never been reproduced or have been reproduced but are not enough to give an idea of the exact form of the alphabet, must be examined on the spot.

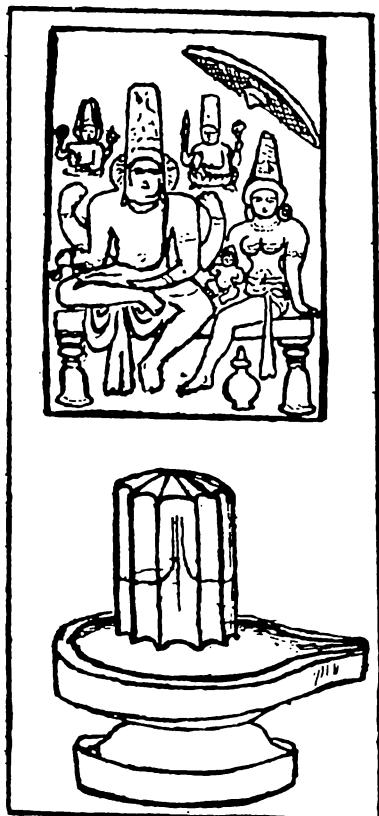

3° Lastly, it is not useless to know the position of the

Plate V.

Tiruvatchi with a single curvature at Panamalai.

Plate VI.

B

Prismatic lingam.

Inner view of the sanctuary at Panamalai.

inscriptions on the monuments. We have therefore studied the monuments on the spot with attention, and we have taken "estampages" and photographs with the object of comparing the styles and the alphabets.

1. Vallam.

Two miles to the east of Chingleput there stands a small hill where one arrives very easily by taking the high-road leading from Chingleput to Tirukkalukkunram. On the right side of the road stand the village and the hill of Vallam. There are three caves excavated on the east side of the latter. The largest of them contains inscriptions. We shall speak of the two others later on.

The Vallam inscriptions are mentioned in S. I. I. Vol. II, Part III, pages 340 and 341. The oldest of them is translated (No. 72) and reproduced (*Plate X.*)

This inscription is found on the two pillars at the entrance to the cave. The language and the alphabet are Tamil.

It says that the cave was cut by Skandasēna, son of Vasantapriyarāja and vassal of King Mahēndrapōtarāja who was surnamed Guṇabhara, Śatrumalla, Lalitāṅkura, Pagāppiḍugu. Here there is no doubt about the name of the king, since the word **Mahēndra** is followed by Pōta-Raja (*i.e.*) King of Pallavas.

However, we do not know if this Mahēndra is Mahēndravarman I, Mahēndravarman II, or a predecessor of Siṁhavishnu, who is mentioned in the Vāyalūr inscription (see *G. O.*, No. 538, 28th July 1909, page 77). It is, however, proper to add that this last king's existence is highly problematical, considering that much credit cannot be given to the list of the

25 kings mentioned in the Vâyalûr inscription as the predecessors of Siṁhavishṇu.

A fourth Pallava prince of the name of Mâhêndra was the son of Râjasimha (vide *S. S. I.* Vol. I, No. 27, pages 22 and 23.)

It is not however probable that this Mahêndra was the contemporary of Skandasêna who excavated the Vallam cave. The son of Râjasimha lived at the beginning of the 8th century, and the form of the alphabet used in the Vallam inscription belongs to an earlier period.

Pl. IX, A, shows the plan of the Vallam cave. From *Pl. IX, B*, we can get an idea of the form of one of the pillars. On both sides of the façade are found bas-reliefs; on the right stands Jyêshthâdêvî considered here undoubtedly as the wife of Śiva and on the left Gaṇeśha probably considered as the son of the same god. This image of god is represented in my *Archéologie du Sud de l'Inde*, (Vol. II, *Pl. XVI. B.*)

The sanctuary contains a lingam; there is every reason to believe that it is as old as the temple itself. It is remarkable that this lingam is cylindrical and not at all prismatic as those of the epoch of Râjasimha.

On each side of the entrance to the sanctuary stand two dvârapâlas, door-keepers of the temple.

Plate VIII shows the image of the dvârapâla on the left side. It was very difficult to photograph this bas-relief, as the interior of the temple is dark and narrow.

It is the front view; the legs are crossed. He has a terrible aspect. His head crowned with hair is adorned with horns.

The pose of the hand which rests on the club deserves special attention. We shall have occasion to find the

Plate VIII.

(VALLAM.)

Left dvārapāla at Vallam.

same special pose in other monuments of the same kind.

The dvârapâla on the right resembles the one on the left.

I shall here make a general remark about the monuments of the Pallava period : the Dvârapâlas have only two hands. It is only after this period that the sculptors gave them four hands, and this plurality of hands has become the rule from the end of the 8th century.

2. Mahêndravâdi.

This village is situated 3 miles to the south-east of the Sholinghur Railway Station near Arkonam (North Arcot District).

Not far from the village is a large tank which perhaps owes its origin to the Pallavas. The village is inhabited by Vaishnava Brahmans.

To the east extends a plain on which there stands a big rock. The rock-cut temple is on the eastern side of this rock. The inscription is written on the pilaster which is at the left end of the façade. The translation of it has been published in page 153 of Vol. IV of *Epigraphia Indica*.

The reproduction of this inscription by "estampage" is found in the plate facing page 152 of the same work ; however, as the form of the letters cannot be easily distinguished in the estampage, we thought it would be useful to take on the spot a fac-simile of the inscription which will be found in *Pl. X*.

The inscription says that Guṇabhara dug the cave called Mahêndra - Vishṇugṛīha in the city of Mahêndra on the bank of the tank of Mahêndra.

From *Pl. XIII A*, one can get a clear idea of the very simple style of the façade.

The pillars (*Pl. XII, A.*) are like those at Vallam. They are square in section, the middle third of which has been made prismatic by chamfering off its corners.

The brackets that support the vault have a curved profile instead of the rectilinear one found at Vallam. The difference however is not very great.

The faces of the cubical parts are adorned with lotus flowers and varieties of rosework sculptured in very low relief. *Pl. XII, B.*, shows the plan of the “cave”. *Pl. XIII, B.*, will give an idea of the dvârapalas; they present a full front view and have a calm pose as befits a temple of Vishnû.

These sculptures have been obliterated by the moulder-
ing of the stone.

The sanctuary contains a clumsy statue of Narasimha which is not at all antique.

3. Dalavânûr.

This village is situated in the Tindivanam Taluq (South Arcot District) 5 miles to the west of Perani Railway Station.

The cave is cut in the southern side of a small hill lying in the north of the village and called “Pañcha Pâñdava Malai”.

It is here necessary to rectify an error regarding the position of the inscription. In the report on Epigraphy (*G. O. No. 518, 18th July 1905*) the inscription written in the Sanskrit language with Grantha-Pallava characters is found, under No. 51 of 1905, mentioned as follows: “on the same pillar” as the inscription No. 50, which is referred to as being “on one of the pillars inside the same cave.” It would appear then

that the inscription is on one of the two pillars which are inside the cave. When I visited Dalavânûr, I searched for it at the abovementioned spot but in vain.

I found the inscription on the pilaster of the façade which is at the left end.

Though placed outside and exposed to rain, the inscription has been admirably preserved and it was easy for me to obtain a very neat 'estampage' of it which will be found in *Pl. XVI, A.*

The inscription has been reproduced and translated (vide *Ep. Ind.*, Part V, Vol. XII, January 1914, p. 225). It says that the cave was cut by King Narêndra surnamed Satrumalla. *Pl. XVI, B.* shows the plan of the cave.

An interesting peculiarity is that the shrine is not placed opposite to the entrance, but to the left of it. It is because the façade of the temple faces the south and the architect wished however that the shrine should face the east.

Pl. XVI, B. shows the entrance to the sanctuary and on each side is a Dvârapâla who raises his hand to his head in sign of adoration.

The sanctuary contains a lingam which is cylindrical as the one at Vallam and not prismatic as those of the epoch of Râjasimha.

The façade of the cave is ornamented at the ends with two Dvârapâlas representing the two types used at this epoch. The one on the left raises his hand as those placed at the entrance to the sanctuary: but the one on the right rests it on a club and the pose of the hand is similar to that of the Dvârapâla at Vallam shown in *Pl. VIII.*

The two pillars at the façade are of the same type

as those at Mahêndravâdi *Pl. XII. A.* The cubical parts are ornamented with lotuses. The two pillars stand one on each side of the entrance to the cave, and above it there is an ornament which is shown in *Pl. XVI, A.* It is nothing but the 'tiruvatchi' we have already mentioned.

The 'tiruvatchi' at Dalavânûr is formed of two arches emerging from the mouth of fabulous animals; the two arches join in the middle, where there is a small platform supporting a Gandharva.

We shall call this form of decoration 'double-arched tiruvatchi,' to distinguish it from the 'single-arched tiruvatchi' of the epoch of Râjasimha.

The façade of the cave is surmounted by a cornice which is decorated with a Kûdu. The Kûdus at Dalavânûr are very well preserved and their design can therefore be seen very well. On the contrary, the other Pallava monuments have Kûdus the stone of which is much weather-beaten.

We see from *Pl. XVI, A.* that it is the Kûdu with the head of Gandharva surmounted by a "shovel-head" that characterises the Pallava art as it has been shown in 'Archéologie du Sud de l'Inde,' Vol. I, page 96. In fact, after the Pallava period, the lion's head is used instead of the "shovel-head."

3. Siyamangalam.

The name of this village being surely the same as Simhamaṅgalam, we can suppose that the original name was Siṁhavishṇu-chaturvēdi maṅgalam after the king Siṁhavishṇu, father of Mahêndravarman I.

The village is one mile to the south of Dêṣûr (North Arcot District, Wandiwash Taluq).

The sanctuary of the temple is cut in a rock. There is a series of maṇḍapams before the shrine, so that, to arrive at the sculptured rock, one has to pass through many very dark halls, and it is only with the help of torch-light that one can see the part of the temple belonging to the days of the Pallavas.

I could not photograph anything here on account of the darkness that reigned in this place. I could only draw a few sketches.

The Sanskrit inscription written in Grantha-Pallava alphabet is engraved on one of the pillars of the façade. It is in such a dilapidated condition that some letters are almost invisible. The 'estampage' of it published in *Epigraphia Indica*, Vol. VI, No. 32, p. 320, does not enable us to distinguish the form of the letters.

We therefore thought it necessary to take a facsimile of it on the spot; it will be found in *Pl. XVII. A.*

The alphabet is similar to those of Dalavânûr (*Pl. XIV. A.*) and Mahêndravâdi (*Pl. X.*), but it completely resembles that of Dalavânûr.

In *Pl. XI.* we have compared the alphabet of Mahêndravâdi, Dalavânûr and Śiyamaṅgalam with that of Panamalai, only on account of some letters that differ most. The two alphabets are simple and not at all florid. The differences existing between them are, however, so numerous that we can affirm that the Dalavânûr and Śiyamangalam inscriptions are anterior to that of Panamalai by one century.

Lastly, it has to be noted that Dalavânûr, Śiyamaṅgalam and Panamalai are very near one another, all of them being situated in the Gingee hills. The difference in the alphabets cannot therefore be explained by a difference in the districts.

The inscription at Śiyamaṅgalam attests to the excavation of the temple of Avanibhâjana-Pallavêśvara by King Lalitâṅkura (*Ep. Ind.*, Vol. VI, p. 320, No. 32.)

Pl. XVII, B, shows that the plan of the cave is nearly the same as that of the one at Mahêndravâdi.

The shrine contains a liṅgam which is cylindrical and not prismatic. On both sides of the entrance to the shrine are found dvârapâlas having this important peculiarity that they are almost like those at Vallam.

On both sides of the façade are placed certain personages whose special attitude is a unique point in the Pallava art. They are men having moustaches and brandishing sticks.

Pl. XVIII represents the man on the left. He is placed in a niche which we see is ornamented with a “double-arched Tiruvatchi” like that of Dalavânûr.

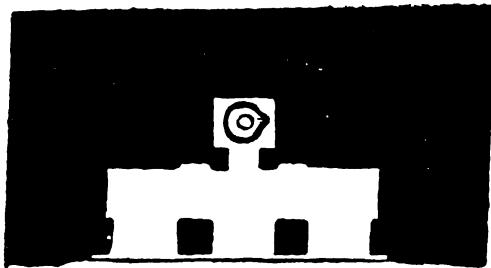

The two pilasters that are on either side of the niche supporting the decoration also deserve our attention. The table of the abacus is formed of two doucines.

This kind of abacus is very archaic and resembles the abacus of the monuments of the Buddhistic period (Amarâvatî) which has the form of a staircase turned upside down.

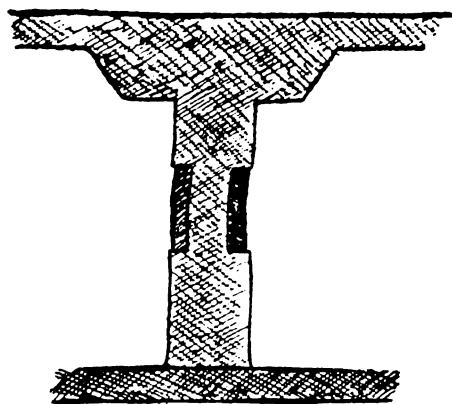

Pl. XIX represents a pillar of the façade of the cave.

It is a pillar square in section like those of Vallam, Mahêndravâdi, and Dalavânûr. A lotus is carved on the lower cube and a lion is seen standing on the upper one. We may think that, if the cave belongs to the time of Siṁhavishṇu, this lion is the symbol of the king, who, in the Kaśâkûḍi plates, is called Avani-siṁha (the lion of the earth.)

The bracket has a circular profile as at Mahêndra-

vâdi and Dalavânûr. However, it is adorned with scroll-work like those at Trichinopoly.

5. Pallâvaram.

M. R. Ry. H. Krishna Sastri writes (*G. O.*, No. 538, 28th July 1909, page 75): “The present station of Pallâvaram on the South Indian Railway is distinct from old Pallâveram, which is a ruined village about two miles south of the Railway station.” The Pancha Pâñdava Malai, the side of which has been excavated by the Pallavas, is not to the south of the station but to the east.

The cave, which is in the hands of the Muhammadans, is in a regrettable condition. One part of it is closed up with mud walls; and all the walls are covered with a thick coating of lime. Again, the inscription in Grantha-Pallava characters is inaccessible in those parts of the cave that are closed up, and in all other places it is covered with lime.

The inscription consists of a single line all along the entablature above the pillars. It is engraved over the whole length, not only of the façade, but also of the first inner lobby. It is made up of a series of names which are evidently the titles or “birudas” of a king (*Vide G. O.* No. 538, 28th July 1909, Page 75, Part II, No. 14). It is noteworthy that the first name in the series is Sri - Mahêndra - Vikrama. It is very probable that the King who cut the cave was called Mahêndra.

As we have already said, the form of the letters is not like that of those at Dalavânûr, Śiyamaṅgalam and Mahêndravâdi.

The beginning of the inscription is reproduced as a specimen in *Pl. XXI, A.* We read: Śrī-Mahēndra-Vikramah, Mattavilāsaḥ, Chetthakāri, Vichitrachittah. One peculiarity about this inscription is that most of the other names are incomprehensible and seem to be words of Telugu origin.

However, among the epithets are found the name Lalitāṅkura which exists in the Śiyamaṅgalam inscription, and Pugāpiḍuka (Pagāppiḍugu) which is found in the Vallam inscription.

Pl. XX shows the plan of the cave.

There are five shrines corresponding to the five gateways. Probably they were each occupied by a liṅgam and the temple was dedicated to Śiva.

The pillars are exactly of the same type as those at Mahēndravāḍi but without the lotus. It is however probable that the lotuses were painted on them.

6. Trichinopoly.

The “Upper cave” cut in the rock at Trichinopoly is covered with inscriptions.

On examining those of the inscriptions that are written in the Grantha-Pallava alphabet, I have ascertained the following facts :

1° The series of names of the king which are engraved on the pillars are all written in the same alphabet as the inscriptions Nos. 33 and 34 of *S. I. I.*, Vol. I, Pages 28, 29, 30.

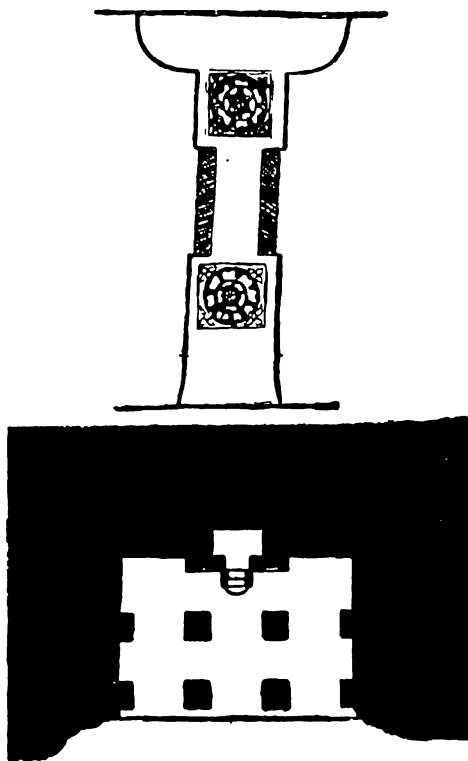

2° This alphabet is very much like that of Pallāveram.

3° There are no inscriptions written in a more archaic alphabet.

Plate XI.

Alphabets compared :

- A. Alphabet of the inscriptions at Dalavânur, Mahêndravâdi, Siyamangalam.
- B. Alphabet of the inscription at Panamalai.

A. Pillar at Mahēndravādi.

B. Map of the cave at Mahēndravādi

Most of the names written on the four pillars at the façade of the cave are reproduced in *Pl. XXIII*. The letters are excellently preserved and give a very correct idea of the alphabet employed. However, most of the names are incomprehensible and are perhaps of Telugu origin.

Mixed up with these, we find however the names: *Nityavinitah*, *Nirapêksah*, *Naihikâmutrikah*, *Virasah*, *Vyavasthitah*, *Vyavasâyah*, *Anumânah*, *Avanibhâjanah*, *Akaruñah*, *Anityarâgah*.

Be it noted that we have already met with the name “*Avanibhâjana*” in the *Śiyamangalam* inscription.

The pillars at the lower end of the cave contain also some names. The series begins on the left by the name *Guṇabhara*. We have said that the inscriptions Nos. 33 and 34 of *S. I. I.*, Vol. I., p. 28, contain the names *Guṇabhara*, *Śatrumalla*, *Purushottama* and *Satya-sam̄da*. All these details are found mentioned in the Annual Report of the Director-General of Archæology for 1903-04, p. 271.

I believe, however, that sufficient stress has not been laid on the following fact.

To the right of the shrine, on one of the pilasters of the façade and at a spot which seems to have been selected for the principal inscription, there are certain engravings in Grantha-Pallava characters.

The inscription begins solemnly with the word “*Svasti*”, then follow the names, *Srî Mahêndra-vikramah*, and *Mattavilâsaḥ*, exactly as in the *Pallâ-varam* inscription.

Pl. XXIV, A represents a copy of what I consider to be the principal inscription at Trichinopoly.

There is no doubt :

1° that the king who excavated the shrine was called Mahēndra, since this name is found in the place of honour;

2° that this king is no other than the one who excavated the Pallāvaram temple, since the Pallāvaram inscription begins likewise with the names Sri Mahēndra-vikrama and Mattavilāsa written in the same alphabet.

The plan of the Trichinopoly cave will be found in *Pl. XXIV, B.*

The pillars of the façade are like those of Vallam. The brackets however are of scroll-work as at Siyamaṅgalam. The cubical parts are ornamented with lotus flowers as at Dalavānūr.

The façade of the Trichinopoly cave is shown in the 'Archéologie du Sud de l'Inde,' Vol. I., *Pl. XXII, A.*

On entering the shrine, we find, on the left, the bas-relief representing Śiva holding the Gaṅgā in his matted hair. This is shown in the same book Vol. I, *Pl. XXII, B* and Vol. II, *Pl. XI, B.*

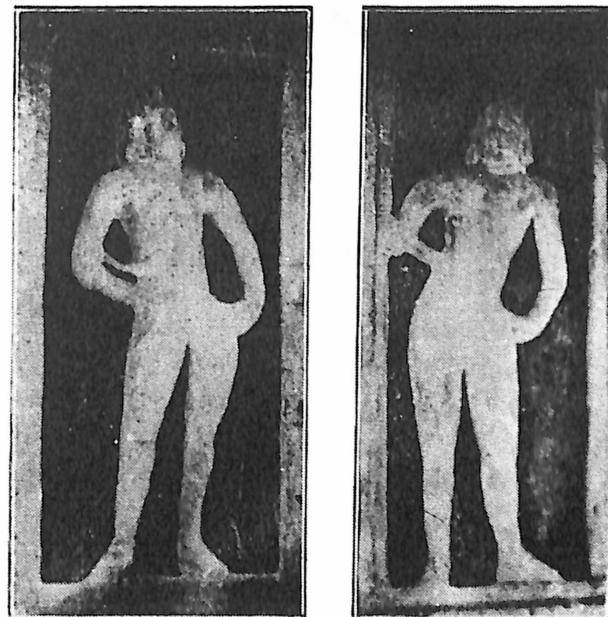

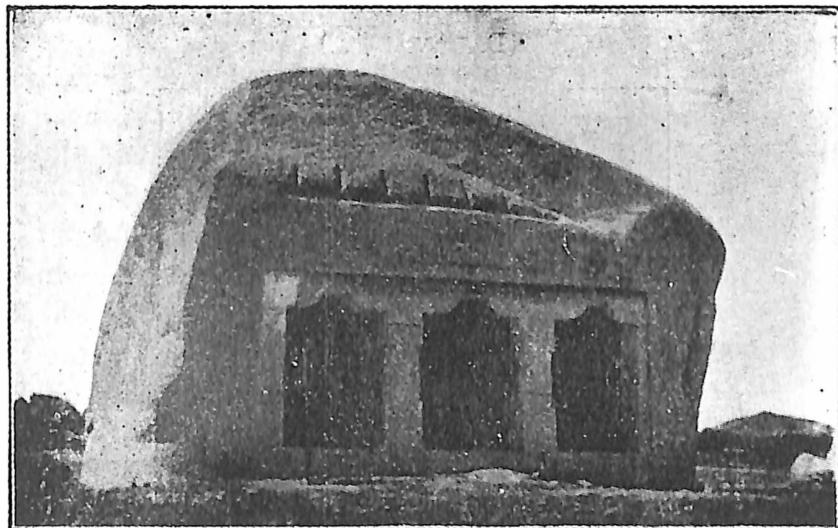

The sanctuary of the temple is on the right of the entrance. It probably contained a lingam that has since been taken away.

From *Pl. XXII* we can form an idea of the dvārapâlas defending the entrance to the sanctuary.

We remark at once that their hands are placed on a club in the same manner as those of the dvārapâlas at Vallam (vide *Pl. VIII.*) and at Śiyamaṅgalam ; their legs are crossed in the same manner ; the general aspect is the same.

Conclusion.

The alphabet of the Trichinopoly and Pallâvaram inscriptions seems to be less archaic than that of Mahêndravâdi, Dalavânûr and Śiyamaṅgalam. One may be inclined to think that the Mahêndra of Trichinopoly is not the same as he of Mahêndrâvâdi, the one being, for instance, Mahêndravarman I, the other Mahêndravarman II.

However, the similarity of the names (birudas) of the king, and, above all, the great resemblance of the style of the sculptures induce us to form a contrary hypothesis.

We shall admit that at the same epoch there existed two Grantha-Pallava alphabets ; the one, that of Mahêndravâdi, Dalavânûr and Śiyamaṅgalam, very simple ; and the other, that of Trichinopoly and Pallâvaram, more ornate, almost florid, in which the straight lines have a tendency to become curved and turned.

We shall admit that the caves of Vallam, Mahêndravâdi, Dalavânûr, Śiyamaṅgalam, Pallâvaram and Trichinopoly belong to the same period, that of a king who bore the names of Guṇabhara (Trichinopoly, Vallam, Mahêndravâdi), Lalitâṅkura (Trichinopoly, Vallam, Pallâvaram, Śiyamaṅgalam), Śatrumalla (Trichinopoly, Vallam, Dalavânûr), Mattavilâsa (Trichinopoly, Pallâvaram), Pagâppidugu (Vallam, Pallâvaram), but whose principal name, which is found at Trichinopoly, Pallâvaram, Mahêndravâdi and Vallam, was Mahêndra, and that this Mahêndra is Mahêndravarman I.

We have many reasons to think so :

1° The alphabets of Mahēndra are less developed than that of Panamalai and make us believe that they differ in age by about one century.

2° The other princes named Mahēndra, and particularly Mahēndravarman II, seem either to have reigned for a very short time or not to have reigned at all.

However, the most conclusive reason seems to be the following: the second verse of inscription No. 33 (*S.I.I.*, Vol. I., p. 29) at Trichinopoly contains a passage, "King Guṇabhara.....which has turned back from hostile conduct," which seems to be an allusion to the fact that King Guṇabhara, that is to say, Mahēndra, was once an enemy of the Sivite religion and was afterwards converted to the cult of the liṅgam.

If, then, we admit with V. Venkayya (*Ep. Ind.*, Vol. III, p. 277) that Mahēndravarman I. persecuted the saint Appar and was afterwards converted by him and that, on the other hand, Appar belonged to the generation which preceded that of King Narasiṁhavarman I, it seems to be highly probable that King Guṇabhara of Trichinopoly is the King Mahēndravarman I.

It may not be impossible that the Sīyamaṅgalam (Siṁha-maṅgalam) temple which contains images of the lion and the inscription of King Avanibhājana, belongs to the days of King Siṁhavishṇu (called Avanisiṁha in the Kāśakūdi plates). It is not impossible, in fact, that the "birudas" such as Śatrumalla, Lalitaṅkura, Avanibhājana were borne also by Mahēndra and by his father Siṁhavishṇu.

Be that as it may, the sculptures of the six caves that we have studied enable us to determine the style of the epoch of Mahēndra which presents the following characteristics;

- 1° Lingams cylindrical and never prismatic.
- 2° Dvārapâlas, always front view, hand sometimes resting on a club with a very peculiar pose and sometimes raised to the head in sign of adoration.
- 3° Pillars, square in section adorned with lotus flowers.
- 4° "Double-arched Tiruvatchis."
- 5° Finally, we notice that the monuments that could be attributed to the epoch of Mahêndravarman I. are all of them rock-cut temples.

CHAPTER III.

CLASSIFICATION OF THE ANTIQUITIES OF THE PALLAVA PERIOD.

Mahēndravarman I. reigned in the first years of the VII century, and Rājasimha in the first years of the eighth. The corresponding styles, separated by an interval of one century, will serve as land-marks to determine the age of Pallava monuments.

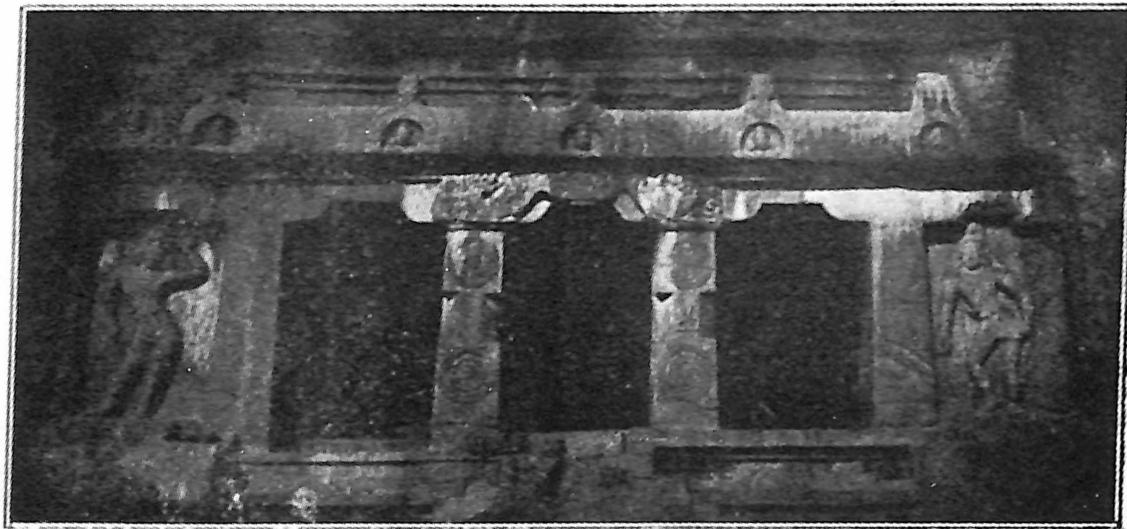

Let us first determine the boundary of the country where there are antiquities attributed to the Pallavas.

From a certain number of copper plates bearing inscriptions, we are led to think, that, about the IV, V and VI centuries, the Pallava empire extended not only over the region of Kāñchīpuram but also over all the district of Nellore up to the mouth of the Godavari and the Kishna.

However, from the point of view of the monuments and the stone inscriptions, the Pallava country is more limited.

We do not know any Pallava monuments situated to the north of the river Swarnamukhi: «The only Pallava stone inscription found in the Nellore District is built into the floor of the Subrahmanyā temple at Mallam in the Gūdūr Taluk. It is dated in the 15th year of the reign of the Pallava King Nandippōttarāśar.» (*Ind. Ant.*, Vol., XXXVII, p. 352.)

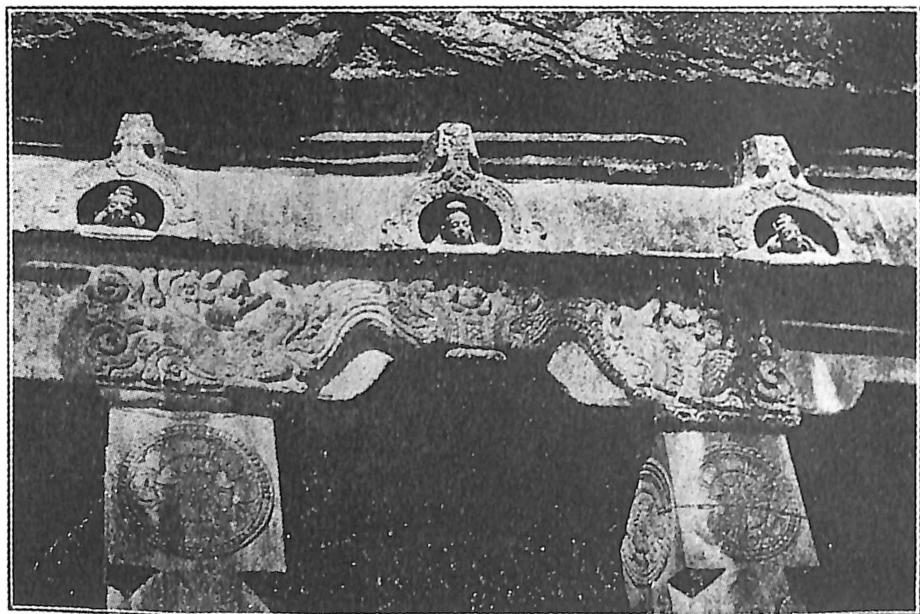

{DALAVĀNUR.}

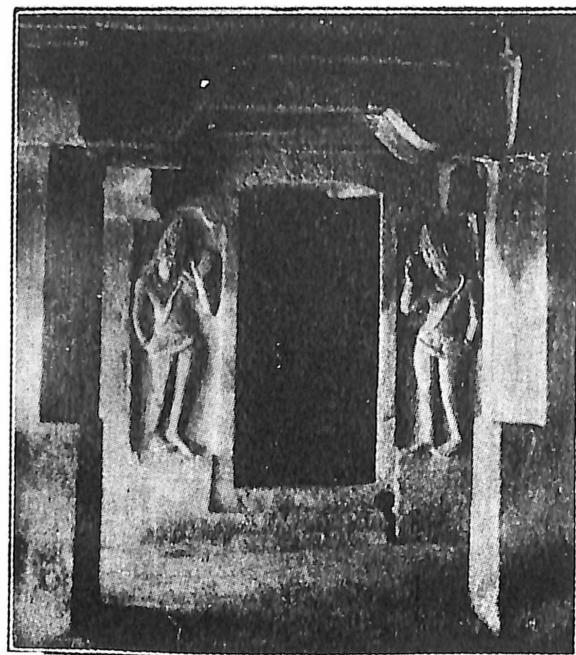

Facade of the cave-temple at Dalavānur.

Plate XVI.

(DALAVÂNÛR.)

A. Sculptures at Dalavânûr.

B. Dvârapâlas near the sanctuary at Dalavânûr.

It is not probable, again, that any monument situated to the south of the Southern Vellaur (Pudukkōttai State) could be attributed to the Pallavas.

The southernmost Pallava monument is the cave of Kunnāndārkōyil (Pudukkōttai State), the inscriptions in which (Nos. 346, 347 and 348), belonging to the time of Kings Nandi and Danti (*G. O.*, No. 1260, August 25th 1915), indicate the last years of Pallava sovereignty.

The cave of Śiva at Nārttāmalai belongs probably to the time of the king Ganga-Pallava Nripatūṅga (*G. O.*, No. 518 of 1905 and No. 365 of 1904).

Lastly, the inscription at Kuḍumiyāmalai, which is so interesting from a musical point of view and belongs probably to the beginning of the VII century, is written in characters similar to those of Trichinopoly. But there is nothing to show that Kuḍumiyamalai was under the direct rule of Mahēndravarman I.

In the west, the inscriptions in the caves of Nāmakal seem to show that the Salem region was under the domination, not of the Pallavas, but of the Kongu kings.

In short, from the point of view of the monuments, we think that the Pallava kingdom extended all along the Coromandel coast from Kālahasti in the north to Pudukkōttai in the south and was bounded in the west by the Eastern Ghats.

In that part of South India that we have delimited, apart from the numerous prehistoric remains, we know no ancient ones older than those of the Pallavas.

An exception must however be made in the case of "the beds of the Pāṇḍavas" which are perhaps very old.

We know that in the districts of Madura and Tinnevelly the caverns containing the "Beds" often have Brāhmī inscriptions which probably are very ancient.

Unfortunately, caverns of this kind which have been found to the north of the Cauvery contain no inscriptions.

On my way to Siyamangalam, I was informed of the existence of similar “Beds” at Kilaṅguṇam (North-Arcot district, Wandiwash Taluk), a village 5 miles to the south of Dēsūr.

At Māmbalappattu railway station (South-Arcot district, Villupuram Taluk) I heard of the existence of “Beds” in the adjacent rocks.

Lastly, when going to Gingee, Singavaram and Mēlachēri, I questioned the villagers about the antiquities of that region. It is thus I discovered a cavern at Kāvakkādu, a village on the Tindivanam-Gingee road, which is two miles to the east of Gingee.

This cavern must have been a small monastery as there are more than 15 beds carved in the stone.

The cavern of Armamalai.—

Certain caverns were fitted up to serve as places of Hindu worship. Such is the cavern of Armamalai which is to the west of the villages of Malayampattu and Kārapattu (North Arcot District, Gudiyāttam Taluk).

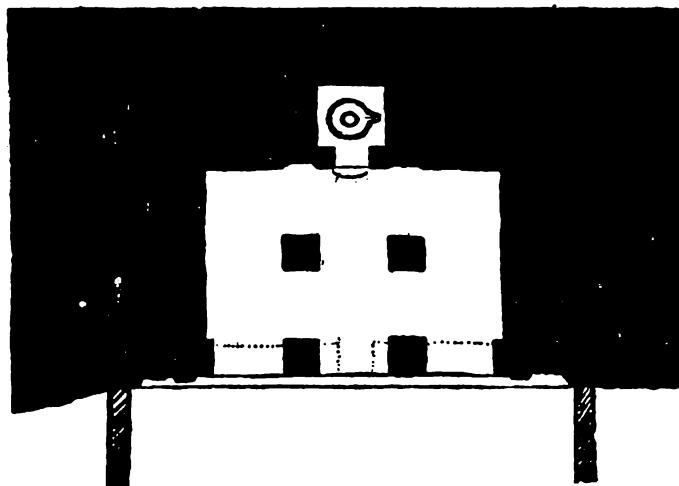

These are the circumstances under which I was led to discover this cave:

The Udayēndiram plates mention that the King Nandivarman-Pallavamalla made a gift of the village of Kumāramangalam. I thought that the village was perhaps the one called Komaramangalam which is midway between Vaniyambadi and Ambur railway stations.

I therefore went to the village and tried to find out its boundaries with the help of the information contained in the Udayēndiram plates.

A. Pallava inscription at Siyamangalam.

B. Map of the rock-cut temple at Siyamangalam.

Plate XVIII.

Sculptures at Siyamangalam.

They say (*S. I. I.*, Vol. II, Part III, p. 372) : « Its western boundary (is the hill called) Lôhitagiri; » going north from this (the western boundary is) on the east of (the hill called) Vêlâlaśikhara; and on the west of (the hill called) Kriśnaśilaśilôchchaya (the cave called) Rauhiṇaguhâ. »

It is thus that I was led to visit the mountain which is situated between the villages of Malayampattu and Kârapattu and which, the natives told me, was called Armamalai.

Having arrived at the west slope of this mountain, I asked the people if there was not a cave near that place. They replied, that, in fact, there was a cavern and showed me the way to it in the midst of the rocks. It is a natural cave, sufficiently spacious, at the bottom of which there is a reservoir of water.

Unfortunately, there is not any ancient inscription in it.

It is certain that this cavern contained a shrine at the time of the Pallavas; for, we find there two stones on which dvârapâlas armed with clubs have been carved. Their costume, their ornaments and their form show, for certain, that these bas-reliefs belong to the Pallava period. The design, however, is very archaic and it is probable that these images are the oldest sculptures that could be attributed to the Pallavas.

As these dvârapâlas are adorned with serpents, it is highly probable that the shrine was dedicated to Śiva.

On the rock which overhangs and thus forms the roof of the cavern, we see numerous traces of paintings. Unfortunately it is impossible to find out what they represent, except in one place where we perfectly recognise the lotuses and the creepers.

These are the only paintings of the Pallava period that remain to us. I believed that the paintings in the Tirumalai (6 miles east of Polur) cavern were old, but, when I saw them, I found out that they were all modern and not interesting.

The “cave” of Kilmâvilangai—(South Arcot District, Tindivanam Taluk) :—

It was by chance, that I discovered in 1915, a small rock-cut temple, which, from its archaic sculptures, appears to be the oldest shrine of this kind.

I took the road from Tindivanam to Désûr with the object of visiting Śiyamaṅgalam.

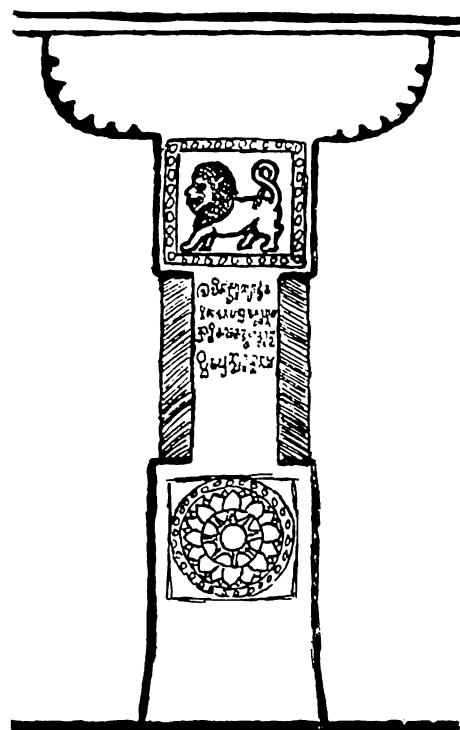

When passing through a small village which is at a distance of about a dozen miles from Tindivanam, I questioned the people in the hope of discovering a rock-cut temple. The villagers replied that they had never seen anything of the kind. One of them, however, who was questioned closely, declared that there was something of the kind at the very place we were in. In fact, a mere look in the direction pointed out by him was enough to perceive a small rock in which a shrine of Vishṇu, that was called the “Mukara-Perumal temple” had been hollowed out.

Pl. XXV, A, shows the general aspect of it. At the entrance stand two dvârapâlas holding a kind of flower in their hand. These personages are only sketched on the stone; the design is very primitive.

At the lower end of the sanctuary and carved in high relief, there is the god Vishṇu holding his emblems “Sankha” and “Chakra” without flames, which is a sign of archaism.

The Kilmâvilangai cave contains no inscriptions.

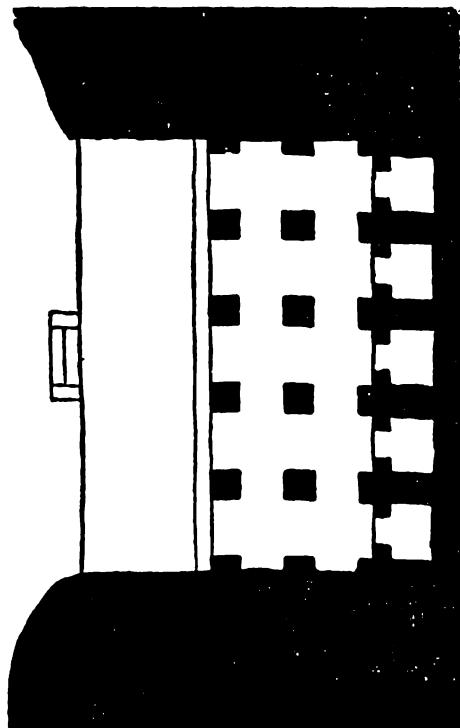

Plate XIX.

A pillar at Siyamangalam.

Plate XX.

Map of the Pallava rock-cut temple at Palkavaram.

Aragaṇḍanallūr (near Tirukoilūr, South Arcot District):—

Some of these rock-cut temples can be attributed to the Pallavas, though we cannot determine their exact age, as these “caves” do not contain any inscription or sculpture. This is the case, for example, of the “cave” of Aragaṇḍanallūr, the plan of which resembles in certain respects that of “the upper cave” at Trichinopoly, but which contains neither sculptures nor inscriptions. The stone is carved irregularly and artlessly.

Pañcha Pāñdava Malai (Kathivadi)—4 miles to the South-West of Arcot (North Arcot District):—

It is for the same reason that we cannot give the exact age of the rock-cut temple found in this place. Its plan resembles that of the Pallāvaram cave.

Singaperumâlkôyil—(Railway station near Chingleput):—

When I asked the villagers of Vallam and Pallāvaram about the rock-cut temples that might exist in that region, they mentioned to me the temple of Singaperumâlkôyil. So I went there and found one.

The shrine of god Narasiṁha, as well as the small veranda in front of it, is cut in the rock. When we get in by the entrance gôpuraṁ we find ourselves in a large courtyard. Turning to the left we enter into a very dark building which is flanked in the south by a temple of “Agopala Valli” and in the north by the temple of “Añdal”.

The main building consists of three chambers which must be crossed for reaching the portion cut in the rock.

The first chamber contains in the middle a statue of Hanumān and all along the northern wall a line of “Âlvârs.”

The second chamber has only two dvârapâlas who stand at the entrance to the third one which contains a statue of Vishnû placed in a recess in the north.

We are now in front of a small door through which we pass into the interior of the rock. Here we find a monolithic chamber which is in direct communication with the niche occupied by the god.

This part of the temple surely belongs to the Pallava period. However the inscriptions could not be distinguished at first sight owing to the darkness that is reigning there.

It was not possible for me to obtain from the priests permission to make a minute examination of this spot.

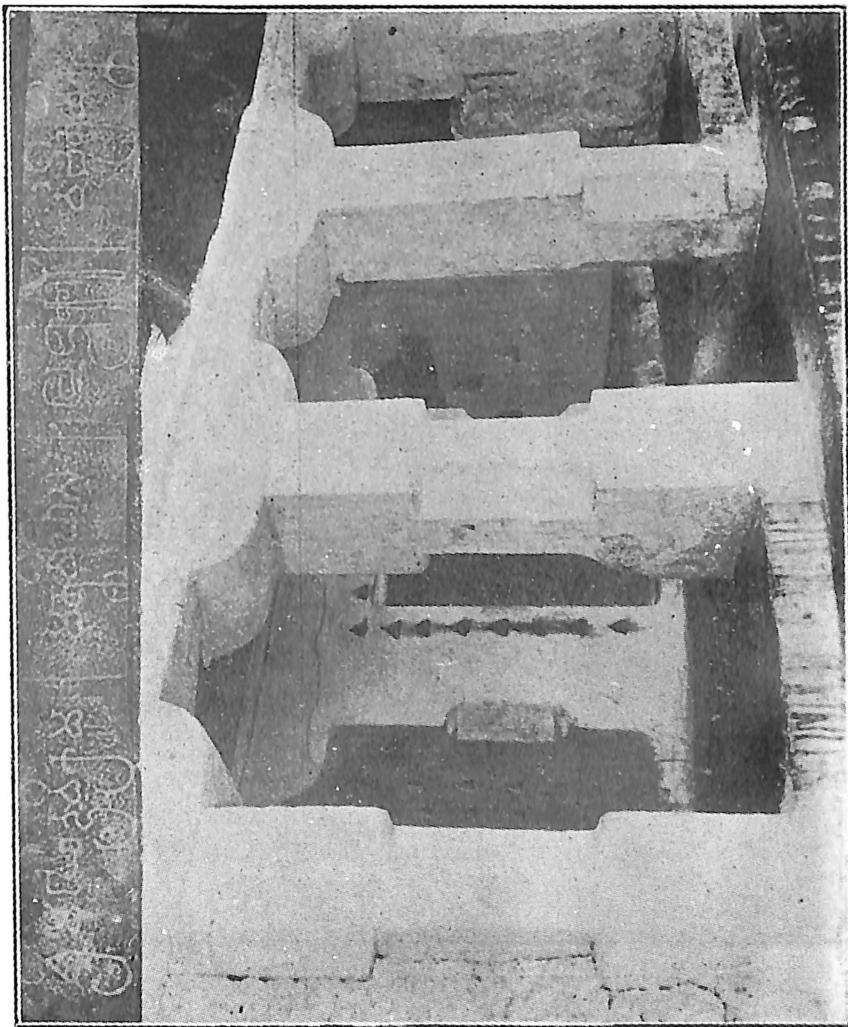

The Department of Epigraphy must direct their researches in that direction: they may find some inscriptions there.

I shall therefore confine myself to simply pointing out that the shrine in the Singaperumâlkôyil temple is cut in the rock and must be attributed to the Pallavas.

Kurânganîmuttam—(North Arcot District, Cheyyar Taluk):

It is probable that the cave situated in this place was attached to the village of Pallâvaram which still exists in the neighbourhood. We have not found in this cave any inscription of the Pallava period. It is true, that this temple, which is completely deserted by the villagers,—(“This ancient monument is now deplorably neglected by the pious people of Kurânganîmuttam” *Vide G. O., No. 961, 2nd August 1913, p. 6.*)—is also

deplorably neglected by the Archæological Department. When I visited the cave in 1915, I observed that the earth which was covering it half way up hid many inscriptions of the age of the Chōlas. It is not however probable that the clearing away of this earth would disclose any Pallava inscriptions.

This cave contains some sculptures representing Dvārapâlas. These are of a very archaic design. They present the front-view and are carved in very low relief. They somewhat resemble the dvârapâlas of the time of Mahêndra, but their attitude is less natural ; they seem to belong to a previous epoch. I am led to believe that they belong rather to the end of the VI century than to the beginning of the VII.

Pl. XXV, B, will give an idea of the aspect of one of these dvârapâlas. The sculpture being damaged, it was impossible to make a drawing of it with greater precision.

Pl. XXV, C, shows the plan of this temple, which is distinguished from those of the other caves that we have so far studied, by the fact that at the end of every row of pillars there is a shrine.

These pillars are of the same type as those of Vallam.

Singavaram—(South Arcot District, Gingee Taluk) :

In the “Madras District Gazetteers, South Arcot, by W. Francis, Vol. I.. Madras, 1906, p. 366,” the temple of Singavaram (2 miles north of Gingee) as well as the image of Vishnū sleeping on the serpent are said to be cut out of the rock.

I therefore went to Singavaram with three objects in view :

1° To examine the style of the sanctuary to know if

its architecture would allow its being classed among the Pallava temples.

2° In that case, to find out if there were any inscriptions.

3° To examine if the image of the Sleeping God resembles the one at Mahābalipuram. This mission seemed difficult to fulfil, for the "Manual" says that Europeans are not allowed to enter the temple : " Europeans are not allowed anywhere near it."

Luckily, this order was not so strictly followed as I believed. After some pourparler, the priests allowed me to enter the first enclosure, then the second, and so on, till at last I found myself face to face with the deity.

It was in fact an *Anantaśayana*, and, as soon as I saw it, I recognised in it the work of the Pallavas. The right arm is stretched out and hangs down as at Mahābalipuram. The stone has however been sculptured newly at a later period.

The body of the Sleeping God is very large in size and extends from one end of the "cave" to the other. This cave consists of two verandahs with two pillars inside and two others at the façade. These pillars are similar to those of the *Vallam* "cave" but are decorated with lotus flowers.

At either end of the façade of the rock-cut temple there are two *dvārapâlas* that mostly resemble those found at the entrance to the shrine at *Dalavânur* (*Pl. XVI, B.*)

There is therefore no doubt that the shrine at *Singavaram* belongs to the time of *Mahêndra*.

I shall here make a remark about the name of this place. It is very probable that *Singavaram* (that is to

say, Siṁha-puram) was the capital of Singapuranādu which contained the villages of Nerkuṇam (*G.O.*, 28th July 1909, No. 86 of 1908), Vedāl (76 of 1908) and Tāyanūr (*G. O.*, 28th July 1910, No. 360 of 1909).

This name is therefore very ancient, and since the dvārapālas of the Anantaśayana temple at Siṁha-pura are of the epoch of Mahēndra, we can safely suppose that Singavaram was founded by Siṁhavishṇu and that it is not impossible that the rock-cut temple was excavated during his time.

Luckily all hope of ascertaining the name of the king who cut this cave is not lost.

In fact, if I have not been able to find there any inscription of the Pallava period, it does not mean that it is impossible to find any.

If the Pallavas have put up any inscription in the temple, it must probably be on one of the pillars in the façade. But the surface of these pillars is hidden by the stones laid here to support the vault of the māṇḍapam that is built in front of the "cave."

If therefore the Department of Epigraphy could clear these pillars temporarily, they will probably discover there an inscription in Grantha-Pallava characters.

In his letter dated 10th March 1916, M. R. Ry. H. Krishna Sastri has been good enough to assure me that the temple of Ranganātha which has been visited by the Government Epigraphist in 1903-4 will be again examined with the object of finding out if there exists any Pallava inscription on the pillars of the "cave."

It is desirable that this work should be done as early as possible.

Tirukkalukkunram—(Chingleput District and Taluk):

On the east side of the Vēdagiriśvara hill there is a rock in which the Orukal-maṇḍapam is excavated. (Vide *G. O.*, No. 538, 28th July 1909, p. 73).

The plan of this cave is similar to that of the shrine at *Mahēndravādi* (*Pl. XII, B.*).

The pillars are of the same type as those at *Vallam* (*Pl. IX. B.*).

The Liṅgam is cylindrical.

The Dvārapālas are of the style of *Mahēndra*.

Pl. XXVI represents two of them. One of them (*Pl. XXVI, A*) stands at the right of the entrance to the shrine. It is big in size. The other (*Pl. XXVI, B*) has its hand raised to the head. It is elegant in form.

To the right of the sanctuary, there is a bas-relief representing *Vishṇu*, and to the left there is another representing *Brahmā*.

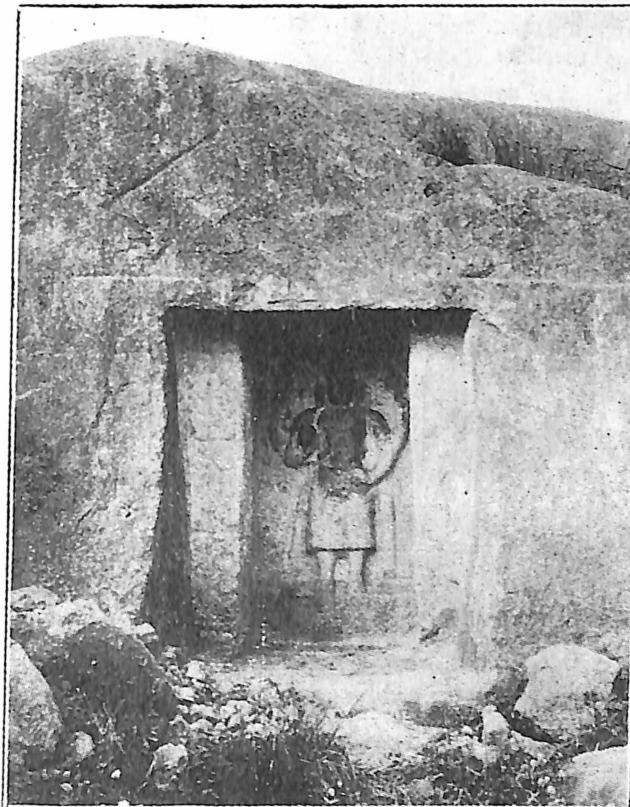

The latter image has a peculiar coiffure which is almost spherical and quite different from what is given to *Brahmā* in other Pallava sculptures (for example, *Mahābalipuram*).

These sure signs of great antiquity do not allow us to share the opinion of M. R. Ry. H. Krishna Sastri (*G. O.* No. 538, 28 July 1909, p. 76) who suggests that this cave must be contemporaneous with the “rathas” of *Mahābalipuram*.

We shall then conclude by saying “Orukal-maṇḍapam” belongs to the style of *Mahēndra*.

Dalavānūr, Śiyamangalam, Mahēndravādi, Vallam, Pallāvaram, Trichinopoly :—

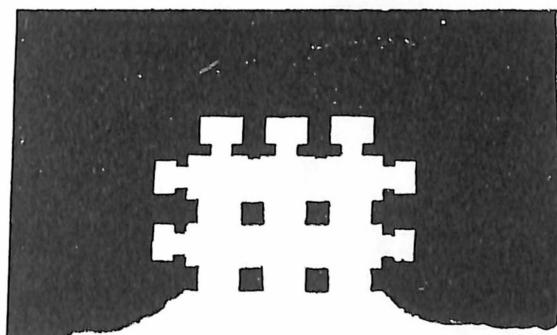

We have already studied these caves, which distinguish the age of *Mahēndra*, and which must be

kunram.

attributed to Mahēndravarman I., except those at Dalavānūr and Śiyamangalam which, as they do not contain the name of Mahēndra, could be attributed to Siṁhavishṇu.

Trichinopoly :—The lower cave resembles the upper one (Vide *Archéologie du Sud de l'Inde*, Vol. I, *Pl. XXI*) and that also could be attributed to Mahēndra.

Vallam—(Near Chingleput):—

We have said that there are three caves at Vallam and we have also described the upper one which contains the inscription of Mahēndra.

It is very probable that the two other "caves" date from the same epoch.

One of them dedicated to Śiva contains a cylindrical lingam and at the entrance to the sanctuary there stand two dvārapālas resting their arms on a club in the style of Mahēndra.

The third cave, dedicated to Vishṇu, contains two dvārapālas that raise their hands to their head and resemble the dvārapāla that stands in the left of the façade of the temple of Dalavānūr (*Pl. VII*).

Māmandūr—(North Arcot District):

Six miles to the south of Kāñchīpuram, there is a stony hillock out of which four "caves" have been excavated.

The two caves in the north are attached to the village of Māmandūr.

The two others that are more in the south are attached to a small village called Narasapoliem or Narasapuram.

Let us first take up the two “caves” in the north, i.e., the caves of Mâmandûr.

The right side cave contains a long inscription in Grantha-Pallava characters. A very large number of letters are visible; but, unfortunately, the stone is so damaged with vertical fissures that the lines of the inscription break off now and then and it is impossible to make any meaning out of it. Mr. E. Hultzsch who mentions this inscription (No. 38—*G. O.*, No. 424, 20th April 1888), declares that it is “illegible”.

However, one important remark has to be made here: The alphabet is identically the same as that of Mahêndravâdi.

Pl. XXVII, B, is a photograph of a small part of the inscription which will enable us to judge of the form of the characters.

The cave was perhaps dedicated to Vishnû.

The pillars of the façade, *Pl. XXVII A*, resemble much those of Mahêndravâdi. Particularly, the lotus flowers that adorn the cubical portions are exactly on the same model.

We may therefore conclude that from a palæographical and architectural point of view this “cave” belongs to the time of Mahêndravarman I.

The left side “cave” at Mâmandûr contains only Chôla inscriptions but its architecture and sculptures enable us to affirm that it very clearly belongs to the style of Mahêndra.

The pillars are of the Vallam and Tirukkalukkunram style. The central shrine contains a cylindrical liñgam. The two others are empty.

The dvârapâlas are graceful and exactly of the style of Mahêndra.

Those that are at the entrance to the central shrine which is dedicated to Śiva have their arm on a club and resemble the dvārapâlas at Vallam, Śiyamangalam and Trichinopoly.

The other dvārapâlas have their hands raised to the head in sign of adoration. The one in the extreme left at the end of the cave resembles much one of the dvārapâlas at Tirukkalukkunram (the one shown in *Pl. XXVI, B*).

The remnant of the paintings on the façade of the cave shows that the Pallava temples were painted.

In short, the two caves of Mâmandûr very clearly belong to the style of Mahêndra.

Narasapoliom—(near Mâmandûr):

The two caves that are found near this village to the south of the Mâmandûr caves and at a very short distance from them are left unfinished and without any inscriptions.

The right side one is very large and contains a series of shrines that probably contained liṅgams. There are no dvārapâlas.

The pilars are of the Pallâvaram type (*Pl. XXI, B*).

The left side cave, the southernmost one, is incomplete and uninteresting.

Tirakkôl—(near Dêshîr, North Arcot District, Wandiwash Taluk).

This village which is occupied by the Jainas is a few miles to the north of Śiyamangalam. When I visited the latter place I was informed that Tirakkôl contained a sculptured rock.

There is not precisely any “cave” in this place but only the outline of a temple hewed out of the rock. The

two pillars at the façade are the only portions whose execution has been begun.

Māṇḍagappattu—(South Arcot District, Villupuram Taluk):

The inscription engraved on the façade, which is unfortunately in a very mutilated condition, leads us to believe that this cave at the back of which there are three niches was dedicated to the three gods Brahmā, Īśvara and Vishṇu. *Pl. XXIX, A*, is a fac-simile of the inscription in which the name of the king is not to be found (inscription No 56 of 1905, *vide G. O.*, No. 518, 18th July 1905, p. 47). We see that the alphabet is much like that of Dalavānūr, Śiyamāngalam, Mahēndravādi.

The façade of the temple is interesting. *Pl. XXVIII* gives an idea of it. The dvārapāla on the right side that presents the front view and belongs to the style of Mahēndra, is noteworthy.

The dvārapāla on the left side (*Pl. XXIX, B*) is very much like those at the Trichinopoly cave.

The dvārapālas being adorned with serpents, there is no doubt that, if the temple was dedicated to the Trinity, the principal God in it was Siva.

Rathas and “caves” of **Mahābalipuram** (the Seven Pagodas)—(Chingleput District and Taluk):

I have said in the “*Archéologie du Sud de l’Inde*” (Vol. I, Architecture p. 103) that the antique remains of Mahābalipuram are not all in the same style:

“When we were speaking of the Pallava monuments of the Seven Pagodes, we divided them into two groups:

« The first group comprising the rathas and caves,
» which are monolithic and the second comprising the
» temples that are not monolithic but built of stone
» There are three of the latter kind: the first situated
» in the north of the village is unimportant; the second
» is built near the light-house on the top of a rock in
» which the Durga cave is excavated, and the third
» which is at the sea side is known under the name of
» 'The Shore Temple.'

« A very attentive examination is not necessary to
» observe that the monuments of the second group are
» not in the same style as those of the first.»

Maintaining this division of the Pallava monuments of Mahabalipuram into two groups, 1° The Rathas and the caves cut in the rock, 2° The monuments built of stone (Shore Temple type), we shall first take up only the sculptured rocks, Rathas and caves that form the first group, and study them from two points of view: 1° the point of view purely architectural, 2° the point of view of inscriptions.

§ I. *The style of the Caves and Rathas
of Mahabalipuram.*

From an examination of the style of the sculptures we are led to enunciate the following two propositions:

1° The Caves and Rathas of Mahabalipuram present certain marks of archaism that enable us to affirm that these monuments belong to an epoch anterior to that of Rājasimha.

(a) Nowhere, indeed, do we find the "Single-arched tiruvatchi" which was the only one used at the time of Rājasimha. On the contrary, the "Double-arched

tiruvatchi" of the epoch of Mahēndra is found in many places: on each of the four faces of the "Draupadi-ratha", on the façade of the "Trimurti cave," in many parts of the "Rathas" found north-west of the bungalow on the bank of the Buckingham canal.

(b) Nor do we see anywhere on the caves and rathas the rearing lions of Rājasimha; the lions on them are always in a squatting and never in a rearing posture.

(c) Another proof is taken from Iconography. In our work ("Archéologie du Sud de l'Inde," Vol. II. Iconographie) we have stated many a time (pages 6-7 and pages 63-64) that the insignia of Vishṇu called "Śaṅkha" and "Chakra" have gone through a great evolution during the course of centuries and can therefore serve in ascertaining the age of the sculptures.

In the temple of Kailāsanātha at Kañchīpuram, the sculptures are all coated with lime and it is almost impossible to know the exact form of the "Śaṅkha" and "Chakra" of the time of Rājasimha.

Luckily, I have been able to ascertain this point during my visit to Panamalai.

We have said that in the cleft of the rock containing the inscription of Rājasimha, translated and published in *S. I. I.* Vol. I, p. 24, there is an image of Mahishāsuramarddani (Kāli). This goddess always bears the Śaṅkha and Chakra; and in the bas-relief at Panamalai, these insignia are in a very good state of preservation and we can observe their form very correctly. Well, then, we remark this peculiarity about them, that they are ornamented with *flames of fire*.

In the monuments of the epoch of Mahēndra, these weapons of Vishṇu are shown without the flames. Besides, in the rathas and caves of Mahābalipuram

these insignia of Vishṇu are represented without the flames.

It being admitted that the sculptors of the epoch of Rājasiṁha ornamented these weapons with flames of fire, we can conclude therefrom that the caves and rathas of Mahābalipuram are anterior to the time of Rājasiṁha.

2° There is a certain resemblance between the caves and rathas of Mahabālipuram and the monuments of the epoch of Rājasiṁha that enables us to affirm that the sculptured rocks of the Seven Pagodas belong to an epoch posterior to that of Mahēndra :

(a) We do not find anywhere in the monuments of the epoch of Mahēndra squatting lions at the base of the pillars. On the contrary, in the Kailāsanātha temple at Kāñchīpuram there are numerous squatting lions. We shall therefore conclude that the squatting lion indicates an age posterior to that of Mahēndra.

The presence of numerous squatting lions in the caves and rathas of Mahābalipuram makes us believe that these monuments are posterior to the time of Mahēndravarman I.

(b) *Pl. XXX* represents one of the pillars of Mahābalipuram the like of which is very often met with in this place.

We remark not only the squatting lion but also the bulbous capital surmounted by a large abacus (pala-gaye), and nowhere in the art of Mahēndra do we see a pillar having such an abacus. This kind of pillars is, on the contrary, very numerous at Kāñchīpuram.

(c) We have given a long description of the dvārapâlas of the epoch of Mahēndra. We do not find the like of them anywhere at Mahābalipuram.

The dvârapâlas of the Seven Pagodas do not present the front-view but only the side-view and turn straight towards the shrine. (Note specially the dvârapâlas at the façade of the Trimurti cave. (*Pl. XXXI, A*). Nor do they rest their hands on a club as those found in the temples of Mahêndra. It must also be admitted that the dvârapâlas of the Seven Pagodas do not resemble those of Kâñchipuram ; but they are in the style of an intervening period.

(d) We have said that in no place was the image of Sômaskanda seen at the back of a shrine of the period of Mahêndra.

This image is seen at the sanctuary of Dharmarâja ratha at Mahabalipuram, but the execution is of a different type from that of Kâñchipuram.

(e) Nowhere in Mahabalipuram do we find the ornament of lotus flowers which is so often seen in the caves of Mahêndra.

In short, by their architectural style, the rathas and caves of Mahâbalipuram appear to be more ancient than the monuments of Râjasimha but more modern than the temples of Mahêndravarman I.

The genealogy of the princes of the dynasty of Siñhavishnu is well known. We know that only three kings have reigned between Mahêndravarman I. and Râjasimha ; they are :

Narasiñhavarman I (about 625-650),

Mahêndravarman II (about 650),

Paramêśvaravarman I (about 655-690).

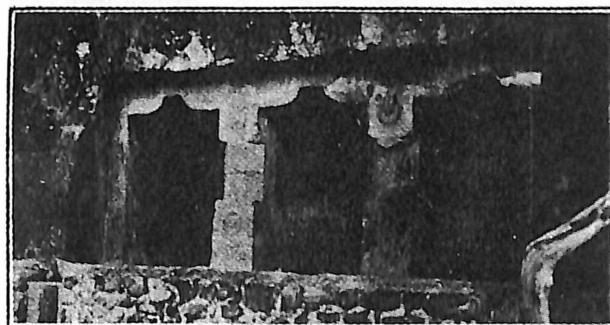

It is highly probable that the reign of Mahêndravarman II was very short.

We shall therefore conclude thus : By their style, the sculptures of the rathas and caves of Mahâbali-

Plate XXVII.

(MANDAGAPATTU.)

The Pallava rock-cut temple at Mandagapattu.

puram belong to the period of transition between the ages of Mahēndravarman I. and Rājasimha. It is therefore very probable that the rocks of the Seven Pagodas were carved during the reign of the two princes Narasiṁhavarman I. and Parameśvaravarman I.

§ II. *The Inscriptions.*

The inscriptions engraved on the caves and rathas of Mahabalipuram can be divided into three groups, which we shall study successively :

(a) The first group of inscriptions is in an alphabet which greatly resembles those of the caves of Dalavā-nūr, Śiyamaṅgalam, Mahēndravāḍi. Some of the letters and particularly the letter ए, śa, are however less archaic. These inscriptions can therefore be attributed to the successor of Mahēndravarman I.

These inscriptions are found engraved on the Dharmarāja Ratha (*Vide S. I. I.*, Vol. I, Nos. 1 to 16, pp. 2 and 3). They are the "birudas" among which the name Sri-Narasiṁha occurs twice. None of these names are found in the inscriptions of Mahēndra. On the contrary, many of them, as Atyantakāma, Srībhara, Sarvatobhadra etc., are among the "birudas" of Rājasimha.

The tenor of these inscriptions seems then to point also to a successor of Mahēndravarman I.

We may therefore conclude, that, according to

- 1° the form of the letters of the alphabet,
- 2° the tenor of the inscriptions,
- 3° the style of architecture,

the King that had the Dharmarājaratha carved out is Narasiṁhavarman I.

Besides, the Trimurti cave contains three niches. That on the left, the northernmost one, contains an image of Subrahmanya (vide *Archéologie du Sud de l'Inde*, Vol. I, p. 84 and Vol. II, p. 49 and *Pl. XVIII, A*). And on the last step leading into this niche, I have found an inscription (*Pl. XXXI, C*) containing only two letters: மல Malla, in characters similar to those of the inscriptions of Narasiṁhavarman I. As we know that this prince had the cognomen of Māmalla,¹ there is reason to believe that the inscription in the Trimurti cave must be attributed to this king.

Again, there is no doubt that the ancient name of Mahābalipuram was Māmallapuram. Therefore it is almost certain that Māmallapuram was founded by Māmalla or Malla, that is to say, by Narasiṁhavarman I.

(b) The second group of inscriptions are in the same florid style of the alphabet that we find in the Kailāsa-nātha temple at Kāñchīpuram. They are the inscriptions in the Gaṇesa temple (*S. I. I.*, Vol. I, No. 18), in the Dharmarāja Maṇḍapam (*S. I. I.*, Vol. I, No. 19), in the Rāmānuja Maṇḍapam (*S. I. I.*, Vol. I, No. 20) and in the third story of Dharmarāja Ratha (*S. I. I.*, Vol. I, No. 17).

The first two inscriptions are identical and are in praise of a king called Paramēśvara (vide *Ep. Ind.*, Vol. X, No. 1). From what we have said above, there is no doubt that this king is Paramēśvaravarman I.

1. *Indian Antiquary*, vol. IX, p. 100, and Plate; Bādami fragmentary rock inscription of the time of the Pallava [Narasim]havishnu, named Mahāmalla, in the same alphabet that we find in the Dharmarāja Ratha at Māmallapuram (Mahābalipuram).

B. The left dvārapāla at
Mandagappattu.

Plate XXX.

A pillar with a simha-basis at Mavaliveram.

This, however, only confirms the hypothesis that we put forward at the end of chapter II, that the florid alphabet of Râjasimha was created by his predecessor and that Rajasimha borrowed an alphabet that, at his time, was already archaic.

The inscription on the east side of the third story of Dharmarâja ratha (*S. I. I.*, Vol. I, No. 17) seems to show that the temple sculptured by Narasimhavarman I. was not consecrated by him but by his successor Paramêśvaravarman I., surnamed Atyantakâma, who gave it the name of Atyantakâma-Pallavêśvara.

(c) The inscription we have just spoken about, which is in florid characters, is written on the east side of the third story of Dharmarâja ratha. The same inscription is found also on the west side but in a non-florid form. The letters have not been cut deep enough and so the inscription remained unperceived for a long time. It was discovered by V. Venkayya. This inscription is placed just above the entrance to the sanctuary, and like the one we have just mentioned, gives to the temple the name of Atyantakâma-Pallavêśvara.

The inscription is so short that it is not possible to determine exactly the kind of the alphabet it is written in.

However, holding an opinion contrary to that of M. E. Hultzsch (*Ep. Ind.* Vol. X, No. 1) I think that the two inscriptions on the third story of Dharmarâja ratha are contemporaneous and both are of the time of Paramêśvaravarman I. The only difference between the two inscriptions is that the one on the west side is in simple characters and that on the east is in florid characters.

We shall therefore conclude by saying that the tenor of the inscriptions, the form of the letters and the style of the sculptures are fully in accord to show that the caves and rathas of Mahâhalipuram were cut in the rock during the reign of Narasiñhavarman I. (625 to 650) and that they were finished and consecrated during the reign of Paramêśvaravarman I. (about 675).

The large sculptured rocks, "Krishna uplifting the Govardhana mountain" and "Arjuna's penance" belong certainly to the same epoch, i.e., the middle of the seventh century.

Concerning the latter bas-relief, it is well to recollect that we cannot any more call it "Arjuna's penance." The merit of having given a satisfactory explanation of this scene goes to Mr. Victor Goloubew who has proved (*Asiatic Journal*, 11th series, Vol. IV, July-August 1914) :

1° that the principal object in the scene is the vertical crevice in the rock, for, it is towards it that all the personages are turned ;

2° that the presence of nâgas in this crevice proves the presence of water.

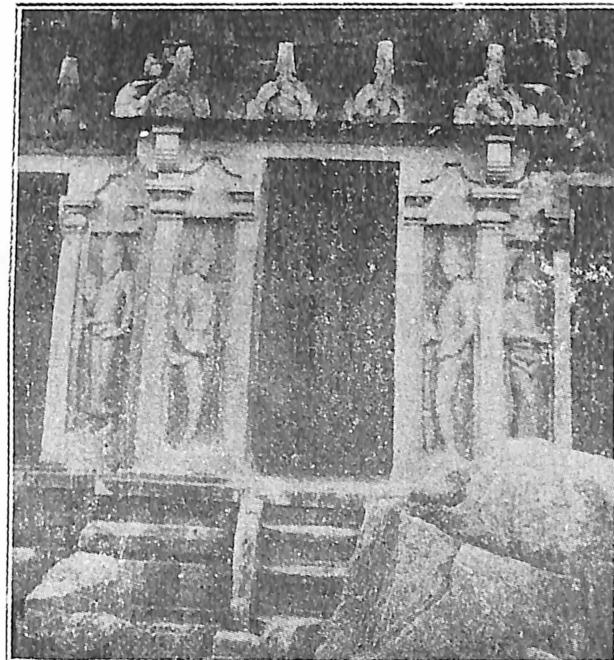

In that case all is clear. During the Pallava epoch the rain-water flowed through the crevice. This cascade then represented the Ganges descending to the earth from the heights of Kailâsa.

On the rock Śiva is seen giving an ear to the prayers of Bhâgîratha.

Thus the personage who has so long been mistaken for Arjuna, is no other than Bhâgîratha, and this grand sight must be called not "Arjuna's penance", but "Bhâgîratha's penance".

(MELACHERI.)

Pallava inscription at Mélachéri.

Cave and inscription of Mélachêri (near Gingee, South Arcot District) :

In the *Madras District Gazetteer*, South Arcot, by W. Francis, Vol. I, page 364, we read : "Mélachêri; three miles north-west of Gingee;.....The shrine of the temple to Maddileśvara to the north of the village and the liṅgam in it, are cut out of the solid rock of a low hill there."

I wished to find out :

1° if the temple cut out of the rock could be attributed to the Pallavas ;

2° if there was any inscription in that temple. So I went to that place on the 1st January 1916 and ascertained that the shrine at Mélachêri was a cave in the Pallava style and that one of the pillars of this rock-cut temple bore an inscription in Grantha-Pallava characters. This inscription was then unknown. M. R. Ry. H. Krishna Sastri, to whom I communicated the result of my investigations, was good enough to say in reply : "The inscription has not been copied by the Department and the credit of the discovery is all due to you."

Pl. XXXII is a reproduction of the "estampage" of the inscription at Mélachêri.

M. R. Ry. S. Krishnaswami Aiyangar, Professor in the University of Madras, has been kind enough to translate it for me and it is given below :

Text.

Kāritam idam nṛpatinā
C(andrā) dity(ē)na s(ār)va(bhaumē)na
Śri śikhari Pallavēśvaramiti
(Śai)vañ(dhā)ma siddh(ir) astu(gr.)

Translation.

This Śiva temple named Śri Śikhari Pallavēśvaram was built by King Chandrāditya, the Emperor. May Success attend.

The Alphabet used in this inscription resembles that of Narasiṁhavarman I. at Mahābalipuram. It seems however to be somewhat less ancient.

It is therefore probable that the temple at Mēlachēri belongs to the middle of the VII century (about 650) and that Chāndrāditya was one of the names of either Narasiṁhavarman I. or Paramēśvaravarman I.

The temple of Mēlachēri consists of a single verandah with two pillars at the façade and a shrine containing a cylindrical lingam.

There is not any bas-relief or decoration.

Sāluvaṅkuppam—(2 miles north of Mahābalipuram):

The age of the antiquities of Sāluvaṅkuppam is a problem that has not been solved up to the present.

We know that the cave of Atiraṇachāṇḍēśvara in this place contains two inscriptions identical in tenor but written in two different alphabets.

The inscription on the northern wall (*S. I. I.*, Vol. I, No. 22) is written in Nāgarī-Pallava characters as that of the 1st and 4th lines at Kāñchipuram.

The inscription on the southern wall (No. 21) is written in Grantha-Pallava characters, as that of Panamalai and the second line at Kāñchipuram. Writing about this subject Mr. E. Hultzsch says (*Ep. Ind.*, Vol. X, No. I, p. 3):

“As I have remarked in *S. I. I.*, Vol. I, p. 10, we meet with the same plurality of the alphabets in the Kailāsanātha temple at Kāñchī. The enclosure of

» this temple bears three tiers of identical inscriptions.
« I am fully aware that my remarks on the third
» and fourth alphabets do not rest quite on firm ground.
» But in the absence of further information, we may
» place the inscriptions written in both alphabets in
» the time immediately preceding the conquest of the
» territory by Vikramaditya (A. D. 733-734 to 746-747).»

After what we have said about the Panamalai inscription and the alphabets of Râjasimha, we cannot agree with Mr. E. Hultzsch who identifies Atiranachanda with Nandivarman-Pallavamalla.

In our opinion, the Sâluvankuppam cave belongs by its inscriptions to the time of Râjasimha.

And we find that an examination of the sculptures of Sâluvankuppam also confirms this hypothesis :

1° The cave of Atiranachanda contains two prismatic lingams which characterise the epoch of Râjasimha.

2° Behind the lingams, at the back of the shrine, there are some images of Sômaskanda resembling those at Kâñchîpuram.

3° The dvârapâlas at the entrance to the shrine have a very characteristic pose which is very much like that of the dvârapâlas in the Kailâsanâtha temple at Kâñchîpuram.

4° The "cave of lions" which is close by contains the rearing lions of Râjasimha.

It is therefore probable that Atiranachanda is none other than Râjasimha.

Besides, the name Atiranachanda figures in the inscriptions at Kâñchi (S. I. I., Vol. I, No. 25, A. 3rd niche, p. 15) as well as in the inscription of Râjasimha at Tiruppôrur (G. O. No. 538, 28th July 1909, p. 77).

Certain reasons, however, lead us to believe that the Cave of Atiraṇachanda at Sāluvaṇkuppam is more ancient than the temples of Panamalai and Kāñchipuram and that it must be ascribed to the beginning of the reign of Rājasimha, *i.e.*, the end of the seventh century (about 690 to 699).

Panamalai—(*vide* chapter I).

Temple of Kailāsanātha at Kāñchipuram — (*vide* Chapter I).

Mahābalipuram—(The Seven Pagodas):

The small temple, which is near the light-house and on the summit of the rock out of which the “Yāmapuri maṇḍapam” has been carved, does not contain any inscriptions; but by its rearing lions, its dvārapālas, its bas-reliefs, it belongs positively to the epoch of Rājasimha.

The same may be said of the small temple situated in the sands to the north of Mahābalipuram and called “Mukundanayar Temple.” It has no rearing lions, but its architecture, its liṅgam and the image of Sōmaskanda point to the time of Rājasimha.

The “Shore Temple” is quite in the style of Rājasimha. It bears no inscription of this king. However, it will be easily admitted that the “bali-pīṭha” which is placed in front of the temple was built at the same time. As this contains some inscriptions of Rājasimha (G. O., No. 961, 2nd August 1913, p. 89), it must be admitted that this king was the author of the “Shore Temple.”

Tirukkalukkunram.—(Chingleput District and Taluk):

Near the summit of the Vēdagīrī mount, by the

side of the way leading to the temple of Vēdagirīśvara, I found a pillar ornamented with a rearing lion of Rājasimha. This isolated piece of sculpture seems to have belonged to a temple which was probably built at the top of the rock at the time of Narasiṁhavarman II.

Tellār—(North Arcot District, Wandiwash Taluq):

This village is 5 miles south-east of Dēsūr on the Tindivanam-Wandiwash road (vide *Madras Districts Manual, North Arcot*, Vol. II, Madras, 1894, page 445).

When travelling through this region I remarked here numerous remains of the Pallava period.

The shrine of the small temple in the north of the village is built of a large number of ancient stones.

By the side of the road, I found a bracket which surely belongs to the time of Rājasimha.

It is also certain that at Tellār there was a temple in the style of Rājasimha.

Since Tellār existed during the Pallava period, it would not be impossible that it was at this place that King Ganga-Pallava Nandippōttaraiyar gained the victory of Tellāru, which won for him the title of Tellārrerinda (vide, e.g., *inscription* No. 180 of 1907).

Kāñchipuram—(Conjeeveram):

It is probable that the temple of Vaikuṇṭha-Perumal which was called Paramēśvara-Viṇṇagaram and which belongs to the style of Rājasimha was built by Paramēśvaravarman II. and finished by Nandivarman-Pallavamalla (G. O., No. 492, 2nd July 1906, Part II, 2, page 61).

I shall however make a remark regarding certain sculptures. We know that the Vimāna of this temple

is surrounded by a verandah which is covered with a long series of bas-reliefs of which only a very small number could be interpreted with the help of inscriptions explaining them. (Vide *G. O.*, No. 492, 2nd July 1906, p. 61). V. Venkayya, writing on this subject, says: « The four walls of the raised verandah which » runs round the central shrine of this temple, are » covered with two rows of sculptures separated by » a small belt, which was apparently intended for » engraving notes explaining the sculptures. They are » divided into a number of compartments each of which » was evidently meant to denote a particular event in » contemporary study. » I think that the idea that these sculptures refer only to contemporary events of the time of Nandivarman is not quite correct. These sculptures have a more general signification.

They represent the whole history of the Pallavas in pictures.

To understand these sculptures we must examine them beginning from the entrance gate and going all round the temple from left to right. The first panel (vide *Pallava Architecture* by *A. Rea*, *Pl. LXXXVIII*) represents Vishṇu, the second Brahma, and then successively Āngiras, Bṛihaspati, Samyu, Bharadvāja, Drōṇa, Aśvathaman. Here (vide *Pallava Architecture* *Pl. LXXXVIII*) a bas-relief represents the birth of Pallava and the litter of sprouts is cut by the side of a person who has his hands raised above his head and stands on one leg in the attitude of a penitent. This evidently illustrates verse 17 of the Kasākūdi plates (*S. I. I.*, Vol. II, Part III, p. 355).¹

1. “ The glorious Pallava, (during whose rule) the earth was untouched “ (even) by the smallest calamity, was suddenly born to him on a litter of

The rest of the series of bas-reliefs surely represent the continuation of the history of the Pallavas. Unfortunately the want of explanatory notes is an obstacle to the identification of these personages.

The temple of Muktēśvara at Kāñchīpuram, which contains an inscription of Nandivarman (No. 14 of 1893, *G. O.*, No. 642, 643 of 14th August 1893), belongs very probably to the time of Nandivarman-Pallavamalla.

The temples of Tirupurāntakēśvara, Airāvatēśvara and Mataṅgēśvara, which belong to the style of Rājasimha (vide *Pallava Architecture*, by Alexander Rea, Madras, 1909), can be ascribed to the end of the VIII century.

It must be specially mentioned that the temple of Mataṅgēśvara contains dvārapâlas having four hands (vide *A. Rea : Pallava Architecture, Pl. XLV*). We have already said that the dvārapâlas of the Pallava period have only two hands. This exception seems to prove that the temple of Mataṅgēśvara belongs to the end of the Pallava period.

Kûram and Tiruppadikunram (near Kāñchīpuram) :

The temples in these two villages, which are built in the Pallava style, also belong probably to the end of the Pallava period.

Tiruppattûr (Musiri Taluq, Trichinopoly District) :

The temple of Kailâsanâtha at Tiruppattur does not contain any Pallava inscription. V. Venkayya (*G. O.*, No. 574, 17th July 1908) has admitted, however, that it is in the Pallava style.

“ sprouts (Pallava) by (the nymph) Mēnakâ, that had been sent to him by “ Sakra (Indra), who was afraid of (losing) his position (on account of the “ sage's austerities).”

According to the photographs No. 89 and 90 of 1907-08 that M.R.Ry. Krishna Sastri has kindly sent me, I think that this temple must be ascribed to the time of the Pallavas.

Tiruvadi (South Arcot District, Cuddalore Taluk) :

When I visited the Siva temple at Tiruvadi, I remarked that the Vimâna of this temple strangely resembled that of Kailasanâtha at Kâñchîpuram.

The plans of the two temples are alike : the Vimâna at Tiruvadi is surrounded by collateral niches.

The rearing lions are found in profusion.

Again, a priest affirmed that the shrine contained a prismatic lingam and an image of Sômaskanda. We know that the temple of Vîrattânêsvâra at Tiruvadi contains (G.O., Nos. 655 and 656, 24th July 1903) a few Pallava and Ganga-Pallava inscriptions (Nos. 56 and 36 of 1903).

It might not be impossible that the Vimâna was built at the end of the Pallava period and repaired later on, certainly at the time of the Chôlas.

Tiruvellarai—(Trichinopoly District) :

I have visited the two rock-cut caves at Tiruvellarai. They are very simple in architecture, and one of them situated in the enclosure of the Vishnu Temple seems to have remained unfinished. They can be attributed to the kings belonging to the dynasty of Nandivarman (vide G.O., No. 492, 2nd July 1906, p. 62) as bearing inscriptions connected with it.

So they are probably contemporaneous with the Siva cave at Kunnâñdârkôyil (Pudukkottai) which contains inscriptions (Nos. 347 and 348, G.O., No. 1260, Aug. 25, 1915) of the same epoch.

CONCLUSION.

We believe, that, in the preceding pages, we have brought certain new elements to bear upon the study of Pallava monuments.

1° The discovery of Pallava antiquities at Panamalai, Armamalai, Kilmâvilangai, Singaperumâlkôyil, Singavaram, Mêlachêri etc., has enlarged the field of investigation.

2° The antiquities already known have been studied with greater attention.

(a) From an epigraphical point of view we have closely examined the form of the various alphabets and we have brought to light certain inscriptions that still remain unpublished.

(b) From an archæological point of view we have tried to compose monographs of the most important monuments. We have given the plan of the temples and facsimiles of the photographs hitherto unpublished.

Up to the present not a single book containing pictures of the monuments of Vallam, Dalavânûr, Mahêndravâdi, Mañdagappattu, etc., has been published; and we think that the sculptures of the epoch of Mahêndra are so important for the history of art that they cannot be allowed to remain unknown any longer.

3° For the first time, we have made a general study of Pallava Antiquities based on a comparison of all the inscriptions and sculptures.

What then is the result of all this labour?

(A) Comparing the tenor of the inscriptions with the form of the sculptures, we have remarked that the monuments containing the inscriptions of a king called Mahēndra, Guṇabhara, Śatrumalla, Lalitāṅkura, belong to the same group by the similarity of their sculptures; and we have given to this kind of architecture the name "style of Mahēndra."

On the contrary, all the monuments bearing the inscriptions of Rājasiṁha have a very peculiar and characteristic style.

So the style of the sculptures accords with the tenor of the inscriptions.

But the form of the letters of the alphabets accords neither with the tenor of the inscriptions nor with the style of the monuments.

Thence, we have come to the conclusion that the form of the alphabet is not an absolute test for the determination of the age of antiquities and that inscriptions which, by their alphabets, seem to belong to different epochs, can, in reality, be contemporaneous.

(B) This comparative study of the collection of Pallava monuments has enabled us to try to compose a history of these antiquities of which a summary is given below :

It would appear that in the first centuries of our era, Hindu temples were built of wood and brick which are not very durable materials, and that is why we do not find their ruins anywhere. The antiquities in the caverns such as we have discovered at Kilaṅguṇam, Māmbalappattu, Kāvakkādu, Armamalai, are the only vestiges of this epoch.

About the end of the VI century a taste for rock-cut temples spread everywhere in the Pallava kingdom.

The most ancient shrine of this kind is perhaps the small cave at Kilmâvilangai. The temple of Korangani-muttam is undoubtedly very old also.

The King Mahêndravarman I, who reigned at the beginning of the VII century (about 600–625), excavated the “caves” of Vallam, Mahêndravâdi, Pallâvaram, Trichinopoly. It is certainly at the same epoch that they cut in the rock the temples of Singavaram, Mañdagappattu, Tirukkalukkunram, Siyamañgalam, Mâmandûr, Dalavânûr. It is not, however, improbable that some of them, for example, those at Singavaram and Siyamañgalam, should have been hollowed out of the rock by Siñhavishnu, father of Mahêndravarman I.

The monuments of the time of Mahêndra are all of them “caves” excavated in the rock. The pillars are formed of two cubical parts separated by a prismatic part. The dvârapâlas present the front view and have very characteristic poses.

Narasiñhavarman I. (Vâtâpikonâ), who lived in the second quarter of the VII century (about 625–650), founded the town of Mahâbalipuram, to which he gave the name of Mâmallapuram, after his surname of Mâmalla, and had the “Rathas”, the “Caves” and the large high reliefs “Kriñhna uplifting the Govardhana mountain” and “Bhâgiratha’s penance” carved in the rock.

The monuments of Mahâbalipuram very much resemble those of the epoch of Mahêndra. However the general aspect of the sculptures is altered. We get only side-views of the dvârapalas who have different poses. The elegant pillars with bulbous capitals take the place of the heavy pillars with cubical capitals. Lastly, these pillars are very often supported

by squatting lions, which is a design never seen in any of the monuments of the time of Mahēndra. The squatting lion should have been an innovation of the artists of Mahābalipuram.

Paramēśvaravarman I. continued some of the works and had inscriptions engraved in them. He had to struggle hard against the Chalukyas about the year 660 or 670 A.D., and it is probable that during this time the works at Mahabalipuram were abandoned.

At the beginning of the VIII century, there appeared the new fashion of building temples entirely of stone and it is then (from about 700 to 710) that Rājasimha built the temples of Panamalai, Kailāsanātha at Kāñchipuram, "Shore Temple" at Mahābalipuram, etc.

The mode of decoration also changed. Squatting lions continued to be sculptured for supporting the pillars; but for supporting the pilasters, they used rearing lions.

This new style continued to be used during the time of King Paramēśvaravarman II, who founded the Vaikuntha Perumal temple at Kāñchipuram and of Nandivarman Pallavamalla.

The Pallava art, which reached its zenith at the time of Narasiṁhavarman I. (caves and rathas of Mahābalipuram), began to decline at the epoch of Rājasimha, and this decadence continued during the reign of the kings of the dynasty of Nandivarman.

G. JOUVEAU-DUBREUIL.

Pondicherry, June 29, 1916.
